QP CODE: 25900974

Scheme of Valuation

MAHATMA GANDHI UNIVERSITY, KOTTAYAM

FIRST SEMESTER MGU-UGP (HONOURS) REGULAR EXAMINATION

NOVEMBER2025 (2024 Admission onwards)

Multi-Disciplinary Course-MG1MDCSTA101 -

DATA ANALYSIS USING LIBRE CALC

Part A (Multiple Choice Questions)

Answer **All** Questions. Each question carries **2** marks

1. (a) Format > Cells > Number
2. (b) B2
3. (b) =MIN(B1:B10)
4. (c) Data values at specific time points
5. (b) BINOM. INV()
6. (a) 0 to 1
7. (a) To compare means between two groups
8. (d) All of the above
9. (d) All of the above
10. (d) Wilcoxon Signed-Rank Test

[10 x 2 = 20]

Part B (Short Essay Type Questions)

Answer any **three** Questions. Each question carries **5** marks

11. Steps for importing CSV files - 2 marks for each step. [Maximum 5 marks]

    Step 1: Go to File > Open > Select the CSV file and click Open. The Text Import dialog will appear.

    Step 2: Choose the correct character set and delimiter (usually comma).

    Step 3: Preview the data and adjust options as needed. Click OK.

12. Definition or steps to create data validation – 5 marks.

    Data validation in LibreOffice Calc is a powerful feature that helps ensure the accuracy, consistency, error prevention and integrity of data entered into your spreadsheets

13. Reason for the argument / Correct definition and properties of ratio scale – 5 marks.

Ratio data includes all characteristics of other scales (nominal, ordinal and interval) and adds a true zero point, allowing for all mathematical operations, including division. It can be used for a wider range of statistical analysis and allows for meaningful comparisons, such as saying one value is twice as large as another.

Definition of ratio scale measurement only – 4 marks,

Example of ratio scale measurement only – 3 marks.

14. Definition of mode – 2.5 marks,

Function to calculate mode – 2.5 marks.

The mode is the value that appears most frequently in a dataset. Calculate the mode in Calc using the mode function: =MODE (range)

15. Definition of correlation – 2.5 marks,

Function to calculate correlation – 2.5 marks.

Correlation measures the strength and direction of the linear relationship between two variables. Types of correlation (Positive, Negative, No Correlation). In Calc use the function: =CORREL (range 1, range 2)

[3 X 5 = 15]
