MAHATMAGANDHI UNIVERSITY, KOTTAYAM
MGU-BVOC (HONOURS) Regular EXAMINATION November 2025
First Semester
Multi-Disciplinary Courses (MDC) - MG1MDCLMT100 – FUNDAMENTALS OF SUPPLY CHAIN MANAGEMENT
(2025 ADMISSION ONWARDS)

Part A (Answer All Questions, Each Question Carries 1 Mark)

1. Types of Supply Chain Management include
a) Lean, Agile, Hybrid

2. Logistics Management focuses on
a) Planning and controlling the movement of goods

3. Supply chain risks can be reduced by
a) Good planning and checking

4. Using blockchain in supply chain helps to
a) Make data clear and trusted

5. A good distribution network ensures
a) Fast and smooth delivery

6. Transport in Supply Chain helps in
a) Moving goods

7. Warehousing is important for
a) Maintaining stock and meeting demand

8. Using IoT in supply chain improves
a) Control and visibility

9. Supply risk means
a) Delay or shortage of materials

10. Digital analytics helps to
a) Plan better and track work

Part B (Any 10 Questions, Each Question Carries 2 Marks)

11. Identify one reason Supply Chain Management is needed.
To ensure smooth flow of goods from supplier to customer / To reduce cost and improve efficiency.

12. Discuss the effect of centralisation on decision-making.

Centralisation leads to faster control, uniform decisions, and better coordination, but may reduce flexibility at lower levels.

13. Tell how technology helps a digital supply chain.

Technology improves speed, visibility, tracking, accuracy, and coordination in the supply chain.

14. Say how a hybrid supply chain mixes lean and agile methods.

Hybrid supply chain combines cost efficiency of lean with flexibility of agile to meet changing customer demand.

. **15. Compare normal supply chains with green supply chains.**

Normal: Focus on cost and speed

Green: Focus on environmental safety, energy saving, and waste reduction

16. Name one role of Supply Chain Management in business strategy.

SCM helps in cost reduction and customer satisfaction.

17. Give reasons for using a decentralized supply chain.

Faster local decisions

Better flexibility

Improved customer service

18. Say what emerging technologies mean.

Emerging technologies are new and evolving technologies like AI, IoT, blockchain.

19. Recall one key function included in Supply Chain Management.

Procurement / Transportation / Warehousing / Inventory management (any one)

20. Tell how transport modes affect delivery time.

Air transport is fastest, road is moderate, and sea is slow.

21. Tell how AI improves accuracy and efficiency in supply chains.

AI helps in demand forecasting, error reduction, faster decision-making.

22. Compare supply chains with and without the use of IT.

With IT	Without IT
Faster operations	Slow operations
Real-time tracking	No real-time tracking
High accuracy	More errors

Part C (Any 4 Questions, Each Question Carries 5 Marks)

23. Distinguish between Lean and Agile Supply Chain Management.

Lean Supply Chain	Agile Supply Chain
Cost focused	Flexibility focused
Stable demand	Changing demand
Waste reduction	Quick response

24. Importance of network design in managing a supply chain.

Reduces transportation cost

Improves delivery speed

Enhances coordination

Ensures customer satisfaction

Improves overall efficiency

25. Advantages of both Global and Green Supply Chain Management.

Global SCM:

Access to global markets

Lower production cost

Better resources

Green SCM:

Reduces pollution

Saves energy

Improves brand image

26. Key phases involved in supply chain decisions.

Planning

Sourcing

Production

Distribution

Returns

27. Concept of a global supply chain.

A global supply chain is a network of suppliers, manufacturers, warehouses, and customers spread across different countries to deliver goods worldwide efficiently.

28. How eco-friendly distribution affects business operations.

Reduces carbon emissions

Saves fuel and cost

Improves brand reputation

Supports sustainability

Meets government regulations
