QP CODE - **25901356**

MAHATMA GANDHI UNIVERSITY, KOTTAYAM

MGU-UGP (HONOURS)

REGULAR EXAMINATION March 2026

Fourth SEMESTER

Skill Enhancement Course (SEC) - MG4SECJMC200 - SOCIAL MEDIA CONTENT DEVELOPMENT

(2024 ADMISSION ONWARDS)

Duration: 1 hour 30 minutes **Maximum Marks : 50**

PART A — Multiple Choice Questions

1b) Demographics such as age, gender, and location

2b) Understand user preferences and content consumption patterns

3a) WhatsApp

4b) Entertaining content

5c) Canva

6b) Using keywords in captions and video scripts so content shows up in app searches

7b) Small, niche audiences with high trust and engagement

8c) Trending hashtag

9a) PowerPoint

10a) Objectives and strategy

11b) Deliver targeted and relevant content

12b) AR and VR environments

13b) Users who leave without interaction

14a) Active audience interaction

15b) User awareness and approval of data use

PART B — Short Answer Questions *(3 Marks)*

16. Define the term social media influencer

- A social media influencer is an individual who has built a significant and engaged following on social media platforms and has the power to affect the purchasing decisions or opinions of their audience
- Influencers operate across niches — lifestyle, fashion, technology, journalism — and are categorised as mega, macro, micro, or nano based on follower count
- Brands collaborate with influencers for product promotion, brand awareness, and audience engagement due to their perceived authenticity and relatability

17. What is meant by video editing techniques?

- Video editing techniques include cutting, trimming, transitions, colour grading, audio synchronisation, motion graphics, and speed control to shape raw footage into a coherent narrative
- Techniques such as jump cuts, cross-cutting, and montage are used to control pacing and storytelling flow

- Advanced techniques include green screen compositing, text overlays, and visual effects that enhance production value for digital and social media content

18. What is the role of video editing tools in digital media?

- Video editing tools such as Adobe Premiere Pro, Final Cut Pro, and CapCut enable creators to assemble, refine, and enhance raw video footage for publication
- They allow addition of captions, transitions, music, colour correction, and effects that improve viewer experience and content quality
- For social media, mobile editing tools enable quick turnaround, allowing creators to produce and publish content directly from smartphones

19. Explain the importance of social media profile for an individual and an organisation

- For individuals, a social media profile establishes personal brand identity, showcases skills and achievements, and enables professional networking and visibility
- For organisations, it serves as a primary communication channel for brand promotion, customer engagement, and reputation management
- A well-maintained profile builds credibility, drives audience trust, and functions as a digital gateway to an individual's or organisation's broader content and services

20. How does social media content creation differ from traditional media content production?

- Social media content is created for specific platforms with format constraints — short videos, image carousels, stories — whereas traditional media content follows established broadcast or print formats with longer production cycles
- Social media production is faster, often real-time, requiring minimal equipment and enabling solo creation; traditional media involves multi-person teams and structured workflows
- Social media content prioritises engagement, shareability, and algorithmic performance, while traditional media focuses on editorial depth, broadcast reach, and scheduled delivery

21. Define analytics tools in social media

- Analytics tools are software platforms that collect, measure, and interpret data about social media performance, including reach, impressions, engagement, follower growth, and conversions
- Tools such as Meta Business Suite, Google Analytics, Hootsuite Analytics, and Sprout Social provide actionable insights to guide content strategy
- They enable marketers to evaluate what content resonates with audiences and optimise future campaigns based on data-driven decisions

22. Explain challenges in interpreting social media data.

- Data overload makes it difficult to identify which metrics are truly meaningful for specific campaign objectives, leading to misinterpretation of performance
- Vanity metrics such as likes and follower counts may not accurately reflect genuine audience engagement or business impact
- Platform algorithm changes, bot activity, and inconsistent data definitions across different platforms further complicate accurate and comparative data interpretation

23. Describe the role of creativity in successful campaigns

- Creativity differentiates a campaign from competitors by producing content that is original, visually compelling, and emotionally resonant with the target audience

- Creative storytelling, humour, unexpected formats, and strong visual identity help campaigns achieve higher organic reach and shareability
- Creativity enables brands to communicate complex messages simply and memorably, driving both immediate engagement and long-term brand recall

PART C — Essay Questions *(15 Marks)*

24. Discuss the role of social media in transforming communication patterns in modern society.

- Social media has shifted communication from one-to-many broadcast models to many-to-many interactive networks, democratising information production and distribution
- Real-time communication, citizen journalism, and viral content have disrupted traditional gatekeeping roles of editors and broadcasters
- Social media has transformed personal communication through instant messaging, community building, and cross-border connectivity
- It has introduced new communication formats — stories, reels, threads — that prioritise brevity, visuals, and immediacy over long-form depth
- Challenges include misinformation, echo chambers, algorithmic filtering, and erosion of privacy in networked communication environments

25. Discuss the major milestones in the evolution of social media, highlighting the contributions of earlier platforms

- Early platforms like Six Degrees (1997) and Friendster (2002) introduced the concept of online social networking and user profiles
- MySpace (2003) popularised personalised profiles and music sharing; LinkedIn (2003) established professional networking as a distinct social media category
- Facebook (2004) redefined scale and social connectivity; YouTube (2005) democratised video publishing; Twitter (2006) introduced microblogging and real-time public discourse
- Instagram (2010) and Snapchat (2011) shifted focus to visual and ephemeral content; WhatsApp transformed private group communication globally
- The rise of TikTok (2016) and short-form video content marked the current era, with algorithm-driven discovery replacing follower-based content distribution

26. Explain the concept of scheduling tools and their importance in digital media management.

- Scheduling tools such as Buffer, Hootsuite, Later, and Sprout Social allow content creators and managers to plan, queue, and automatically publish social media posts at predetermined times
- They enable consistent posting frequency — a key factor in algorithmic reach — without requiring real-time manual publishing
- Scheduling tools support multi-platform management from a single dashboard, saving time and ensuring coordinated campaign execution
- They provide analytics integration, allowing teams to schedule content at peak audience activity times for maximum engagement
- For organisations and agencies managing multiple accounts, scheduling tools are essential for workflow efficiency, team collaboration, and campaign coherence

27. Map out the measurement techniques for campaign effectiveness

- **Reach and Impressions** — measuring how many unique users saw the content and how many total times it was displayed across platforms
- **Engagement metrics** — tracking likes, comments, shares, saves, and click-through rates to assess how audiences interacted with campaign content
- **Conversion tracking** — using UTM parameters, pixel tracking, and landing page analytics to measure how many users completed the desired action (purchase, sign-up, download)
- **Sentiment analysis** — evaluating the tone of audience responses and mentions to gauge qualitative perception of the campaign
- **Return on Investment (ROI)** — comparing campaign costs against revenue generated or goal completions to determine overall effectiveness and justify future budget allocation
