MG4DSCMBG203-

FOOD SAFETY FOOD HYGIENE AND PUBLIC HEALTH

PART A – Multiple Choice Questions (1 mark each)

1. Slowing microbial growth
2. Molds
3. Serratia
4. Slimy bacterial growth
5. Digestive system
6. Food-borne diseases
7. Staphylococcus aureus
8. Physical hazard
9. Viruses
10. Prevent contamination

PART B – Fill in the blanks (1 mark each)

11. acid /Lactic acid
12. water/food
13. cysts (contaminated food/water)
14. wholesome food
15. Chemical sanitizing agents

PART C – True / False (1 mark each)

16. True
17. True
18. False
19. True
20. True

PART D – One word answers (1 mark each)

21. Bulging of can
22. Removal of internal organs / digestive tract/viscera
23. Potato / Onion / Bread etc
24. Food safety management system
25. Rice
26. Aflatoxin

27. Proper cooking ,Refrigeration ,Personal hygiene ,Avoid cross-contamination
28. Enterohemorrhagic *Ecoli* (EHEC)

29. Advantage of CIP (Clean-In-Place) -Saves time & labour , Ensures hygiene Reduces contamination

30. Critical control point (CCP) - Step where hazard can be prevented/eliminated , Essential in HACCP system

31. Improper storage effect - Spoilage, Microbial growth , Loss of quality

32. Protozoan parasite

PART E – Short answers (3 marks each)

33. Aerobic and anaerobic organisms and spoilage, - Bacterial-surface slime, putrefaction, souring, Taint. (1mark) Yeast spoilage (1mark) Mold spoilage (1mark)

34. Caused by S.typhi, food and water borne. Spread via contaminated food and water, food handlers play major role, (1.5 marks) indicate poor sanitation and hygiene conditions. (1.5 marks)

35. Viral disease transmitted by faecal-oral route, associated with contaminated water,shellfish, raw foods. Causes infectious hepatitis affecting liver . (1.5 marks) Important in community outbreaks. (1.5 marks)

36. Improperly canned foods- botulism risk. *C.botulinum* grows in anaerobic condition, produces toxin, (1 mark) spores survive in inadequate heating process, (1 mark) common in low acid foods. (1 mark)

37. Raw foods- meat, poultry,eggs,milk. (1 mark) Food handlers-carriers of pathogen. (1 mark) Water and environment- soil, air, equipment etc(1 mark)

38. Jointly establish Codex Alimentarius Commission, develop international food standards and codes of practice, (1 mark) conduct risk assessment of food hazards, (1 mark) help to improve food control system. (1 mark)

PART F – Long answers (8 marks each)

39. Microbial causes of food spoilage

- Bacteria: souring, putrefaction etc (2 marks)
- Yeasts: fermentation, discolourations (1 mark)
- Molds: discoloration, toxins (2 mark)
- Factors: moisture, temperature, pH (1.5 marks)
- Examples: milk spoilage, meat spoilage (1.5 marks)

40. Food-borne pathogens & public health significance

- Bacteria: Salmonella, E. coli (2 marks)
- Viruses: Norovirus, Hepatitis A (2 marks)
- Parasites: Giardia (1 mark)
- Effects: diarrhoea, vomiting, outbreaks (2 marks)
- Prevention: hygiene, cooking, sanitation (1 mark)
