ANSWER KEY
QP CODE:25901458

MAHATMA GANDHI UNIVERSITY, KOTTAYAM
MGU-UGP (HONOURS) REGULAR EXAMINATION March 2026
FOURTH SEMESTER
Skill Enhancement Course (SEC) - MG4SECPOL200 - DISASTER MANAGEMENT
(2024 ADMISSION ONWARDS)

PART A

1. b). Estimate losses and plan recovery

2. b). GIS and satellite monitoring

3. b). Consistent, accurate, and timely messaging

4. c). Secondary man-made disaster

5. c). National Disaster Management Authority

6. c). Relief-oriented approach

7. b). State Disaster Management Authorities

8. a). Reducing greenhouse gas emissions

9. b). Sustainable development

10. b). Continuous counseling, social support systems, and resilience-building strategies

PART B

11. Community Based Disaster Risk Reduction–CBDRR-local knowledge and participation–community centered planning–identification of local hazards–mapping vulnerable households–risk awareness programs–capacity building through training-community emergency response teams–first aid rescue skills–strengthening local preparedness–early warning dissemination–evacuation planning drills–reducing exposure and vulnerability–improving housing infrastructure–safe shelters development–community resource mobilization–local leadership coordination–collective decision making–enhancing adaptive capacity–sustainable risk reduction practices–resilient communities.

12. Ability of individuals, communities, systems–withstand shocks stresses–capacity to adapt recover–concept of disaster resilience–absorbing impacts of hazards–maintaining essential functions–quick recovery after disasters–rebuilding stronger safer communities–importance for sustainable development–reducing long term vulnerability–improving preparedness planning–strengthening infrastructure institutions–social economic environmental resilience–community awareness and adaptive strategies–disaster resistant development

approaches–supporting climate change adaptation–enhancing disaster management effectiveness.

13. Active involvement of local communities–grassroots participation in planning–inclusive decision making–use of indigenous knowledge–traditional coping mechanisms–local hazard understanding–community ownership of disaster programs–greater accountability transparency–improved preparedness response capacity–volunteer networks support systems–effective early warning dissemination–community awareness campaigns–strengthening trust between authorities–collaborative governance structures–sustainable disaster risk reduction initiatives–empowered resilient communities.

14. District Disaster Management Authority- leadership–local level disaster governance–coordination of stakeholders–integration of local bodies, panchayats, municipalities–line department cooperation–collaboration with police, fire services, health departments–emergency response agencies–planning district disaster management plans–risk assessment preparedness strategies–resource mobilization, logistics management–relief rescue coordination–communication with state authorities–information sharing mechanisms–ensuring timely response actions–minimizing confusion duplication–strengthening inter agency coordination–efficient disaster response operations.

15. Strategic Environmental Assessment framework–evaluation of environmental impacts–policy program planning–integration of disaster risk assessment–identifying hazard prone areas–consideration of climate related risks–flood landslide cyclone vulnerabilities–risk sensitive land use planning–sustainable infrastructure development–environmental sustainability principles–preventive risk reduction approach–integration of mitigation strategies–reducing environmental degradation–promoting resilient development planning–long term environmental safety.

16. Sendai Framework for Disaster Risk Reduction- International agreement adopted 2015–global framework for disaster risk reduction–period 2015 to 2030–successor to Hyogo Framework–priority understanding disaster risk–improving data knowledge sharing–strengthening disaster risk governance–institutional coordination mechanisms–investing in disaster risk reduction–resilient infrastructure development–enhancing disaster preparedness–build back better recovery principle–global cooperation partnerships–support for developing countries–reducing disaster losses–protecting lives livelihoods infrastructure.

17. Multi-level disaster governance structure–national, state, district authorities coordination–National Disaster Management Authority policy guidance–strategic planning framework–State Disaster Management Authority implementation–state level coordination–District Disaster Management Authority operational response–local execution–information flow between levels–situation reports coordination meetings–resource sharing logistics support deployment of response forces–integration with national disaster response force–state emergency services–ensuring unified command system–efficient disaster response management.

18. Importance of clear communication channels–timely information dissemination–situational awareness–coordination among response agencies–police fire medical teams–use of emergency communication systems–radio satellite digital networks–avoiding duplication confusion–efficient resource allocation–public information alerts warnings–community awareness guidance–inter agency collaboration mechanisms–incident command systems–rapid decision making coordination–effective disaster response operations–building trust cooperation–improving emergency management outcomes.

PART C

19.Four phase disaster management cycle–continuous risk management process–prevention-mitigation- preparedness- response–mitigation reducing disaster risks hazard mapping land use regulation–structural safety measures–preparedness planning training awareness–early warning systems evacuation plans–response emergency rescue relief operations–search rescue medical aid–recovery rehabilitation reconstruction efforts–restoring livelihoods infrastructure–build back better principle–long term resilience development.

20.Climate change and global warming–rising greenhouse gas emissions–urban heat island effect–deforestation land use changes–increasing frequency intensity of heat waves–health impacts heat stroke dehydration–cardiovascular respiratory stress–vulnerable groups elderly children–outdoor workers high risk exposure–economic productivity losses–pressure on health systems–mitigation strategies urban greening–cool roofs water availability–early warning systems public awareness–climate adaptation planning.

21.Disaster Management Act enacted 2005–legal framework for disaster governance–establishment of NDMA- SDMA- DDMA–institutional coordination mechanisms national disaster management plans–preparedness mitigation strategies–creation of National Disaster Response Force–specialized response teams–strengths improved coordination–policy guidance capacity building–limitations bureaucratic delays–resource gaps implementation challenges–need for decentralization–greater community participation–strengthening local preparedness.

22. Community awareness- disaster risks–local participation in planning–grassroots engagement–use of indigenous knowledge practices–local hazard identification- community based preparedness, training–volunteer response groups, effective early warning dissemination–evacuation coordination support–building trust cooperation with authorities–shared responsibility culture–enhancing resilience adaptive capacity–reducing disaster vulnerability–sustainable disaster preparedness–empowered resilient communities.
