QP CODE: 25901554

SCHEME OF EVALUATION

MAHATHMA GANDHI UNIVERSITY, KOTTAYAM

MGU-UGP(HONOURS) REGULAR EXAMINATION

MARCH 2026

IV Semester

Skill Enhancement Course(SEC) - MG4SECSTA200 -

Introduction to Spreadsheet and LaTeX Typing

Time:1 hour 30 minutes Max. Marks: 50

Part A
Answer any SEVEN questions.
Each question carries 2 marks

1. Definition/Example 2 Marks
   A cell address is the location of a cell in a spreadsheet, identified by its column letter and row number.
   Example: A1, B5, C10.

2. Explanation/syntax 2 Marks
   The command in Beamer is used to customize the appearance of presentation elements such as navigation symbols, item symbols, footlines, headlines, and other layout component

3. `\section*{}`
   OR slash section star 2 Marks

4. Definition 2 Marks
   An error alert in Data Validation is a message that appears when a user enters invalid data in a cell. It helps ensure that only acceptable values are entered.

5. The compiler mainly used for Beamer presentation is
   PDFLaTeX 2 Marks

6. Explanation / syntax 2 Marks
   A Pivot Table is used to summarize, analyze, and organize large amounts of data in a spreadsheet. It allows users to quickly calculate totals, averages, counts, and compare data.

7. Definition 2 Marks
   Margins are the blank spaces around the edges of a page (top, bottom, left, and right) that define the printable area of a document.

8. Explanation 2 Marks
   Filtering by numbers means displaying only the rows that meet specific numerical conditions such as greater than, less than, between, or equal to certain values.

9. Correct syntax

   ```
   \textbf{}
   ```

   OR
   Example 2 Marks

10. Function name is CORREL() 1 Mark
    CORREL(A1:A10,B1:B10) 1 Mark

$(7 \times 2 = 14)$

Part B
Answer any FOUR questions.
Each carries 6 marks

11. Explanation 3 Marks
    Syntax:

    ```
    =VLOOKUP(lookup_value, table_array, col_index_num, [range_lookup])
    ```

    OR Example:

    ```
    =VLOOKUP(101, A2:C10, 2, FALSE)
    ```

    3 Marks

12. Definition 3 Marks
    Features:

    - Supports chapters using `\chapter`
    - Suitable for long documents
    - Automatically organizes front matter and back matter
    - Provides structured formatting

    OR
    Example:

    ```
    \documentclass{book}
    \begin{document}
    \chapter{Introduction}
    This is the first chapter.
    \end{document}
    ```

3 Marks

13. Explanation 6 Marks
Filtering allows users to display only specific data that meet certain conditions.

- **Text Filter:** Filters data based on text conditions such as begins with, ends with, or contains.
- **Number Filter:** Filters numbers using conditions like greater than, less than, equal to, or between.
- **Date Filter:** Filters data based on dates such as today, yesterday, this month, or specific date ranges.

This helps in analyzing large datasets efficiently.

14. Expanation OR Example:

```
=SUM(A1:A10)
```

Example:

```
=COUNT(A1:A10)
```

4 Marks

Two differences 2 Marks

15. Any two correct code gives full marks 6 Marks

A)

```
f(x) = \int_{1}^{6} x^4 \log x \, dx
```

$$f(x) = \int_1^6 x^4 \log x \, dx$$

B)

```
y = \frac{x^3}{25}(5\log x - 1) + \frac{x^2}{25}
```

$$y = \frac{x^3}{25}(5 \log x - 1) + \frac{x^2}{25}$$

C)

```
3\alpha + 2\beta = 6
```

16. Any 3 points 6 Marks

Part C
Answer any ONE questions.
Each carries 12 marks

17. Explanation/Syntax 9 Marks

1. Itemize List (Bulleted List)

Syntax:

```
\begin{itemize}
\item Item 1
\item Item 2
\item Item 3
\end{itemize}
```

2. Enumerate List (Numbered List) Syntax:

```
\begin{enumerate}
\item First
\item Second
\item Third
\end{enumerate}
```

3. Description List Syntax:

```
\begin{description}
\item[LaTeX] A typesetting system
\item[Spreadsheet] Data management tool
\end{description}
```

Examples 3 Marks Example:

- Apple
- Orange
- Mango

Example:

(a) Step One
(b) Step Two
(c) Step Three

Example:

LaTeX A document preparation system.

Spreadsheet Software used for data analysis.

Any correct three syntax or correct 2 syntanx and examples give full mark

18. Definition/Examples 6 Marks
Importance 6 Marks

Data visualization in spreadsheets refers to presenting data using charts, graphs, and diagrams. It helps users understand complex data easily.

Importance:

- Makes data easier to understand
- Helps identify trends and patterns
- Improves decision making
- Simplifies large datasets
- Allows quick comparison of values

Common visualization tools include bar charts, pie charts, line graphs, and histograms.

$(1 \times 12 = 12)$
