QP CODE-**25901677**

MAHATMA GANDHI UNIVERSITY, KOTTAYAM
MGU-UGP (HONOURS)
REGULAR/IMPROVEMENT/REAPPEARANCEEXAMINATION APRIL 2026
SECOND SEMESTER
Multi-Disciplinary Courses (MDC) - MG2MDCFSQ100 -
LIFESTYLEDISEASES AND SOCIAL HEALTH PROBLEMS
(2024 ADMISSION ONWARDS)
Duration: 1 Hour 30 MinutesMaximum Marks: 35

PART-A

1. The systolic blood pressure measures _____.
b) The pressure when the heart contracts and pumps blood – CO1 | K
2. Identify a non-modifiable risk factor for hypertension.
c) Family history – CO4 | K
3. Elaborate HIV.
b) Human Immunodeficiency Virus – CO2 | K
4. What is the main function of a rehabilitation center?
c) Helping individuals recover from addiction – CO2 | K
5. Select the benefits of regular exercise in managing blood pressure.
d) All of the above – CO1, CO4 | U
6. The type of diabetes diagnosed during pregnancy
c) Gestational Diabetes – CO1 | K
7. Lifestyle diseases are
d) All of the above – CO1 | K
8. Select a common consequence of smoking at young ones.
a) Increased risk of lung disease – CO2 | K
9. _____ dietary approach is recommended for managing diabetes mellitus
a) Low glycemic index foods – CO4 | U
10. _____ type of diabetes is characterized by autoimmune destruction of pancreatic beta cells
a) Type 1 – CO4 | K
11. Select the disease that is most commonly caused by smoking.
b) Lung cancer – CO2 | K
12. Select the purpose of relapse prevention strategies.
a) To help recovering alcoholics avoid triggers and stay sober – CO2 | U
13. List two drugs that are stimulants.
b) Cocaine and caffeine – CO2 | K
14. Pick the odd one out
a) Healthy Diet – CO1 | K
15. Class 2 obesity is also known as
a) Severe obesity – CO3 | U

PART-B

16. Memorize the preventive measures and management of obesity. – CO3 | K
    Obesity can be prevented and managed through a combination of healthy lifestyle practices. A balanced diet rich in fruits, vegetables, whole grains, and lean proteins while limiting sugar, fat, and processed foods helps maintain healthy body weight. Regular physical activity such as walking, jogging, or exercise for at least 30 minutes daily is essential. Adequate sleep, stress management, and avoiding sedentary habits also contribute to obesity prevention. Management of obesity includes behavioral therapy, nutritional counseling, medical supervision, and in severe cases, medications or bariatric surgery.
17. Describe the ways to prevent AIDS. – CO2 | K
    AIDS can be prevented by practicing safe sex through the use of condoms, avoiding multiple sexual partners, and maintaining mutual monogamy. Sharing of needles, syringes, or sharp instruments should be strictly avoided. Blood transfusions should be done only with properly screened blood. Pregnant women with HIV should receive appropriate treatment to reduce mother-to-child transmission. Public awareness, HIV testing, early diagnosis, and antiretroviral therapy also play important roles in prevention.
18. Explain the symptoms and complications of uncontrolled diabetes. – CO1 | U
    Uncontrolled diabetes may cause symptoms such as excessive thirst, frequent urination, unexplained weight loss, fatigue, blurred vision, increased hunger, and slow wound healing. If left unmanaged, it can lead to serious complications including cardiovascular disease, kidney damage (nephropathy), nerve damage (neuropathy), eye disorders such as retinopathy, diabetic foot ulcers, infections, and in severe cases diabetic ketoacidosis or coma.
19. Describe the long-term effects of alcohol on the heart. – CO2 | K
    Long-term alcohol consumption can have harmful effects on the heart. It may lead to high blood pressure, irregular heartbeat (arrhythmia), weakened heart muscles known as cardiomyopathy, and increased risk of stroke and heart failure. Excessive alcohol intake also contributes to elevated cholesterol and triglyceride levels, which increase the risk of coronary artery disease and other cardiovascular complications.
20. Illustrate how obesity affects reproductive health. – CO3 | K
    Obesity negatively affects reproductive health in both men and women. In women, it can cause hormonal imbalance, irregular menstrual cycles, polycystic ovarian syndrome (PCOS), infertility, and complications during pregnancy such as gestational diabetes and preeclampsia. In men, obesity may reduce testosterone levels, impair sperm quality, and contribute to erectile dysfunction. Overall, obesity decreases fertility and increases reproductive health risks.
21. Discuss the link between drug abuse and depression. – CO2 | K
    Drug abuse and depression are closely linked, as substance abuse can both contribute to and worsen depressive disorders. Many drugs alter brain chemistry and neurotransmitter levels, leading to mood disturbances, emotional instability, and depressive symptoms. Individuals with depression may misuse drugs as a form of self-medication, which can create dependence and worsen mental health over time. Drug abuse also affects relationships, work, and physical health, further increasing the risk and severity of depression.
