MAHATMA GANDHI UNIVERSITY, KOTTAYAM
MGU-BVOC (HONOURS) Regular EXAMINATION April 2026
second SEMESTER
Multi-Disciplinary Courses (MDC) - MG2MDCLMT100 - WAREHOUSE OPERATIONS MANAGEMENT
(2025 ADMISSION ONWARDS)

Duration: 1 hour **Maximum Marks: 35**

Remember(K), Understand(U), Apply(A), Analyse(An), Evaluate(E), Create(C), Skill(S), Interest(I) and Appreciation(Ap)

Students should attempt at least one question from each course outcome to enhance their overall outcome attainability.

Part A

(Multiple Choice Questions, Answer all questions, Each question carries 1 marks)

1. Customization of goods is a _____ service.
Answer: Value-added service.
2. What is the purpose of packing?
Answer: To protect goods during transport.
3. "C items" in ABC analysis are:
Answer: Low-value, high-quantity items.
4. What is the factor influencing warehouse location?
Answer: Transportation facilities.
5. Warehousing bridges the gap between production and _____.
Answer: Consumption.
6. Technology adoption in warehouse operations mainly enhances _____.
Answer: Accuracy.
7. What is the goal of warehouse layout?
Answer: Improve material flow.
8. Tools used for protection of materials in a warehouse are:
Answer: Material handling equipment.
9. Heavy-duty vertical lifting equipment:
Answer: Crane.
10. Selling oldest stock first follows which method?
Answer: FIFO.

Part B

(Short Essay Questions, Answer any 5 questions, Each question carries 5 marks)

11. Explain the key principles and practical importance of warehouse challenges.
Warehouse challenges include increasing demand for faster delivery, space constraints, rising labour costs, inventory mismanagement, high energy consumption, and environmental impact. These challenges affect operational efficiency and customer satisfaction. Understanding warehouse challenges helps organizations improve inventory control, reduce operational costs, improve delivery performance, and support sustainability. Solutions include automation, Warehouse Management Systems (WMS), optimized layout design, workforce training, real-time inventory tracking, and demand forecasting.
12. What is a Bill of Lading and why is it a legal contract?
A Bill of Lading (B/L) is a transport and warehouse document used in logistics. It acts as proof of shipment, receipt of goods, and evidence of ownership. It is considered a

legal contract because it defines the agreement between the shipper and carrier regarding the transportation of goods. It includes details such as quantity, type of goods, destination, and delivery terms. It ensures transparency, legal compliance, and protection of rights and responsibilities of both parties.

13. Discuss challenges faced in safety measures in warehousing and suggest suitable solutions.

Warehousing faces several safety challenges such as fire hazards, accidents during material handling, improper handling of hazardous materials, theft, pilferage, and lack of employee training. Equipment-related injuries and poor security systems also increase risks. Suitable solutions include installing fire protection systems, emergency exits, CCTV surveillance, regular employee safety training, proper use of material handling equipment, and compliance with safety standards and regulations. Providing protective equipment and maintaining safety awareness also help reduce accidents and losses.

14. Describe the procedure for identifying hazardous cargo using MSDS.

The procedure for identifying hazardous cargo begins with verifying the Material Safety Data Sheet (MSDS), which provides information about chemical composition, hazard classification, handling precautions, storage requirements, and emergency response measures. Labels and hazard symbols must be checked to identify whether the material is flammable, toxic, corrosive, or radioactive. The UN number and proper shipping name are verified for accurate identification. Packaging is inspected to ensure containers are leak-proof and properly sealed. Shipping documents and Dangerous Goods Declarations are also reviewed to ensure safety and legal compliance.

15. Discuss the role of energy-efficient lighting in sustainable warehouses.

Energy-efficient lighting plays an important role in sustainable warehouses by reducing electricity consumption and operating costs. LED lighting systems consume less energy and have a longer life compared to traditional lighting. Energy-efficient lighting helps reduce carbon emissions and environmental impact. It supports green warehouse practices and improves overall sustainability while maintaining operational efficiency.

16. Describe the role of security guards in warehouse protection.

Security guards play an important role in warehouse protection by monitoring entry and exit points, preventing theft and pilferage, checking vehicles and documents, and supervising movement of goods. They support CCTV surveillance and help maintain warehouse discipline and safety. Security guards also respond to emergencies and protect warehouse assets, employees, and inventory from damage and unauthorized access.

17. Describe safety equipment used when handling hazardous materials.

Safety equipment used for handling hazardous materials includes gloves, safety goggles, face shields, masks, respirators, protective clothing, safety shoes, fire extinguishers, spill control kits, emergency eye wash stations, warning signs, and labels. These safety devices protect workers from chemical exposure, fire hazards, contamination, and injuries while ensuring safe handling and storage of hazardous cargo.
