25900826

MGU-UGP (HONOURS) FIRST SEMESTER EXAMINATION NOVEMBER 2025

MG1DSCFNN100-BASIC NUTRITION FOR HOTEL OPERATIONS

PART A

1. What is physiological functions of food
   Ans: Energy giving, body building and protection and regulation
2. Define health
   Ans: (WHO) Complete state of physical, mental and social wellbeing and not merely the absence of disease or infirmity
3. What is nutrition
   Ans: Nutrition is the study of food and how it affects the health and growth of the body.
4. State the concept of nutrients
   Ans: Nutrients are the chemical components in food. Eg, Carbohydrates, protein, Lipids, Vitamins, Minerals
5. List the importance of meal planning
   Ans: save money, save time, reduce food wastage, and nutritional variety
6. What is heteropolysacchrides
   Ans: Containing more than one type of sugar unit eg, Agar pectin, heparin
7. What is the role of protein in muscle building
   Ans: it provides the amino acids that are the building blocks for repairing and rebuilding muscle tissue that breaks down during exercise
8. What is the RDA of carbohydrates for an individuals
   Ans: 130 grams per day
9. Importance of Vitamin B1 in the body
   Ans: converting carbohydrates into energy, making it vital for cellular function, the nervous system
10. How vitamins are classified
    Ans; Fat soluble and water soluble vitamins
11. What are water soluble vitamins
    Ans: Vit. B complexes and Vit. C
12. What are the food sources of tocopherol
    Ans: nuts, seeds, and vegetable oils
13. List the functions of zinc
    Ans: supports the immune system, helps with wound healing, and is necessary for cell growth and DNA and protein synthesis
14. What are the factors affecting BMR

Age, gender, body composition, Physical activity, Environmental conditions

15. What is specific dynamic action (SDA)
    Ans: The amount of energy required for the digestion, absorption and utilizing the food that we consumed

PART B

16. Explain how cultural or regional influences and personal preference affect the meal planning
    Ans: providing a framework of preferred ingredients, cooking methods, meal timing, and traditional dishes, while personal preferences introduce individual tastes, dietary restrictions, and nutritional goals that modify these cultural norms.
17. What are the five main food groups
    Ans: 1. Cereals, grains and millets 2. Pulses and legumes, 3. Milk and meat products, 4, fruits and vegetables 4. Fats and sugars
18. What does fat soluble vitamins means
    Ans; Fat soluble vitamins are the vitamins soluble in water and stored in our body, excessive intake is toxic to the human body
19. What are the main functions of protein in the body
    Ans: Building and repairing tissues, providing structure, acting as enzymes to speed up chemical reactions, and serving as messengers through hormones, improves immunity, Energy provision
20. What is the importance of dietary fat in maintaining cell structure and function
    Ans: fundamental building blocks of cell membranes, Nutrient Absorption, Energy Storage, Insulation and Protection
21. Explain how age and gender influence energy requirements
    Ans: Energy needs are highest in children and adolescents due to growth, then decrease with age, especially in older adults, due to a decline in basal metabolic rate (BMR) and lean body mass. Gender differences exist because men, on average, have a higher BMR than women due to differences in body size and composition.

PART C

22. Discuss about major function of food
    Ans: 1. Physiological functions-Energy giving, body building and protection and regulation,
    2. Psychological functions- satisfy the emotional needs, mother can express their love by preparing the kid’s favorite meal. Reward for good behaviors and punishment for bad behaviors
    3. Social functions- Family get together, wedding and birthday parties, in the religious context foods are served in the temple church and mosque.

23. Elaborate water and its role in maintaining health
    Ans: maintains bodily fluid balance**,** regulates body temperature, waste removal, lubricates joints and protects, aids in digestion and nutrient absorption.
24. Explain the concept of energy balance, including factors affecting energy requirements
    Ans: Energy balance = energy input equals to energy output
    Factors affecting energy requirement- age, gender, body size and composition, hormonal status and growth, environmental conditions.
