25900828 **Reg.No : .....**

Name : .....

MAHATMA GANDHI UNIVERSITY, KOTTAYAM

MGU-UGP (HONOURS) REGULAR /IMPROVEMENT/ REAPPEARANCE EXAMINATION NOVEMBER 2025

FIRST SEMESTER

Multi-Disciplinary Courses (MDC) - MG1MDCFSQ100 - FOOD PROCESSING TECHNOLOGY

(2024 ADMISSION ONWARDS)

Duration: 2 Hours **Maximum Marks: 35**

Remember(K), Understand(U), Apply(A), Analyse(An), Evaluate(E), Create(C), Skill(S), Interest(I) and Appreciation(Ap)

Students should attempt at least one question from each course outcome to enhance their overall outcome attainability.

Part A

Multiple Choice Questions

Answer all questions

Each question carries **1** marks

1. The technique used to reduce the size of food for easier handling and preparation is _____ [U] / [CO1]

   a). Blanching b). Packaging c). Drying & Dehydration d). Cutting & Chopping

2. Identify the method which enhances flavous, nutritive quality and digestibility of food [K] / [CO1, CO3]

   a). Fermentation b). Extrusion c). canning d). Pasteurization

3. Which of the following is the most critical food safety objective of conventional cooking [U] / [CO1, CO3]

a).Enhancing the food's aroma and texture.

b).Reducing the connective tissue to increase food cost.

c).Increasing the food's overall nutrient density.

d).Killing pathogenic microorganisms, such as bacteria and viruses.

4. [U] / [CO3]

Name the technique invented by Louis Pasteur in 1864

a).Freezing

b).Milling

c).Pasteurization

d).Smoking

5. Identify the type of dryer which uses a rotating drum to dry food. [K] / [CO2]

a). Spray dryer b). Rotary dryer c). Tray dryer d). Tunnel dryer

6. Name the process by which sugar is converted into alcohol without the presence of oxygen. [K] / [CO1]

a). fermentation b). respiration c). putrifaction d). digestion

7. Refrigerated food is spoiled if [K] / [CO2]

a). Change in colour or odour

b). Hard texture

c). Increased weight

d). No visible change

8. The primary purpose of LTLT pasteurization is to: [U] / [CO4]

a). Improve the texture of food

b). Increase the product's sweetness

c). Sterilize food completely

d). Kill pathogens while retaining product quality

9. During pasteurization, milk is cooled to ____°C to prevent bacterial growth after heating. [K] / [CO2]

a). 4°C b). 15°C c). 25°C d). 10°C

10. Identify the low-temperature preservation method? [K] / [CO1]

a). Dehydration b). Canning c). Freezing d). Pasteurization

11. The enzyme tested to check the effectiveness of pasteurization is called ____. [K] / [CO2]

a). Lactase b). Protease c). Lipase d). Phosphatase

12. Identify the method used to sterilize heat-sensitive equipment in the food industry. [U] / [CO2]

a). Moist heat b). Radiation c). Filtration d). All of the above

13. Recognise a potential concern regarding food irradiation. [K] / [CO4]

a). enhance flavour b). enhance texture c). increase nutrient content d). May cause the formation of harmful compounds

14. Select the correct statement about canning: [U] / [CO4]

a). High acid foods can be processed at 100ºC b). Low acid food can be processed at 121ºC c). No processing is needed for fish products d). All of the above

15. Identify the method used for concentrating food products. [K] / [CO4]

a). evaporation b). freeze drying c). ultrafiltration d). all of the above

[15x1 = 15]

Part B

Short Essay type Questions

Answer **4** questions

Each question carries **5** marks

16. Comment on nutrient losses during food processing [U] / [CO1]

17. Describe the differences between tertiary processing and primary and secondary processing. [U] / [CO1]

18. Write a short note on importance of food processing [U] / [CO1, CO3]

19. Discuss the advantages and disadvantages of drying as a food preservation method. [U] / [CO4]

20. Give a detailed note on dehydration with its principle. [U] / [CO1, CO4]

21. Exaplain canning of fruits [U] / [CO2]

[4x5 = 20]
