MAHATMA GANDHI UNIVERSITY, KOTTAYAM

MGU-BVOC (HONOURS) Regular EXAMINATION November 2025

First SEMESTER

Skill Development Components (SDC) - MG1SDCLMT100 - INTRODUCTION TO LOGISTICS MANAGEMENT

(2025 ADMISSION ONWARDS)

Duration: 1 hour 30 minutes Maximum Marks: 50

Part A
Multiple Choice Questions Answer all questions
Each question carries 1 marks

1. Recognize reverse logistics activities.

Correct answer: (b) Return of defective products from customers

2. Logistics management is a part of

Correct answer: (a) Supply Chain Management

3. Recall the scope of logistics.

Correct answer: (b) Includes planning, implementing, and controlling the movement and storage of goods, services, and related information

4. Reverse logistics strategy focuses on

Correct answer: (a) Returning goods from customers to the company

5. Information sharing in agile logistics ensures

Correct answer: (a) Better coordination across the supply chain

6. Recall the primary focus of logistics strategy.

Correct answer: (a) Achieving cost efficiency and customer satisfaction

7. Third-party logistics providers are also known as

Correct answer: (a) 3PL companies

8. A company adopting green logistics analyses its transportation system mainly to:

Correct answer: (b) Reduce fuel use and emissions

9. Marketing creates demand while logistics fulfils it through timely product movement.

Correct answer: (a) Complementary relationship

10. Financial risk in logistics outsourcing can occur due to:

Correct answer: (b) Hidden costs or partner's financial instability

Part B

Short Answer Questions Answer any 10 questions
Each question carries 2 marks

11. Need for packaging in logistics

- Protects goods from damage during handling, transport, and storage.Helps in easy identification, labeling, and tracking of products.Facilitates efficient loading, unloading, and stacking.

12. One feature of logistics

- Ensures smooth movement and storage of goods from origin to consumption.Integrates activities like transportation, warehousing, and inventory management.Aims at timely and cost-effective delivery.

13. Use of simulation model in logistics

- Helps in analyzing and testing logistics operations without real-world risk.Supports decision-making by predicting outcomes of alternative strategies.Improves efficiency by identifying bottlenecks.

14. Emergence of supply chain management from logistics

- Logistics expanded beyond transportation and storage to include supplier and customer coordination. Growing need for end-to-end integration led to SCM as a broader concept.SCM includes logistics but also focuses on relationships, information flow, and value creation.

15. Main advantages of logistics and supply chain management

- Reduces total operating costs through efficient movement of goods.
- Ensures timely delivery, improving customer satisfaction.
- Enhances competitiveness by optimizing resources and processes.

16. Importance of implementing a logistics strategy

- Helps in achieving cost savings through planned and efficient operations.Ensures timely delivery and meets customer expectations.Aligns logistics activities with overall business goals.

17. Main goal of lean logistics strategy

- Eliminate waste in transportation, storage, and handling. Improve efficiency and reduce lead time. Deliver value to customers at the lowest possible cost.

18. Role of a logistics manager in smooth flow of goods

- Plans and coordinates transportation, warehousing, and inventory.Ensures timely movement and delivery of products. Resolves issues and maintains communication across the supply chain.

19. Meaning of logistics outsourcing

- Hiring an external company (3PL) to handle logistics activities.Helps firms focus on core business while experts manage transport, warehousing, etc.Reduces cost and increases operational efficiency.

20. Importance of global logistics in international trade

- Enables smooth movement of goods across countries and continents.
- Supports exporters and importers in managing transport, customs, and documentation.
- Reduces delays and improves global market competitiveness.

21. Role of logistics in improving customer satisfaction

- Ensures timely and accurate delivery of products.
- Reduces product damage through proper handling and storage.
- Improves service reliability, leading to repeat purchases.

22. Main advantages of logistics outsourcing

- Reduces operational cost by using external expertise and infrastructure.
- Improves service quality through professional logistics management.
- Allows companies to focus on core business activities while 3PL handles logistics.

Part C
Short Essay Questions Answer any 4 questions
Each question carries 5 marks

23. Explain the role of logistics management in achieving business efficiency and customer satisfaction.

Logistics management ensures that materials and finished goods move smoothly from suppliers to customers with minimum cost and maximum speed. By efficiently planning transportation, warehousing, and inventory control, it reduces delays, avoids stockouts, and lowers operating expenses. At the same time, timely delivery, safe handling of products, and accurate order fulfillment improve the customer experience. When customers receive the right product at the right time and in good condition, their trust and satisfaction increase, helping the business maintain loyalty and competitiveness.

24. Explain the influence of military logistics on business logistics development.

Military logistics introduced systematic planning, coordination, and large-scale movement of supplies, which later became the foundation of modern business logistics. During wars, the military developed techniques for efficient transportation, inventory control, warehousing, and communication to ensure timely delivery of equipment and resources. After the wars, these concepts were adapted by businesses to manage commercial supply chains. Tools like routing systems, forecasting, material handling, and strategic supply planning in industries today are directly influenced by military logistics practices.

25. Describe how globalization affects logistics trends.

Globalization has expanded business operations across countries, increasing the need for faster, more reliable, and cost-effective logistics systems. Companies now depend on international sourcing, global manufacturing, and cross-border distribution, which requires advanced transportation networks, digital tracking, and integrated supply chain systems. Global competition also pushes firms to adopt trends like multimodal transport,

warehouse automation, and real-time information sharing. Overall, globalization creates a demand for more flexible, technology-driven, and globally coordinated logistics processes.

26. Explain the meaning of strategy options in logistics management.

Strategy options in logistics management refer to the different approaches a company can choose to achieve its logistics goals, such as lowering costs, improving speed, or increasing service quality. These options may include lean logistics to reduce waste, agile logistics to respond quickly to changes in demand, or outsourcing logistics to specialized third-party providers. By selecting the most suitable strategy, businesses can align their logistics operations with overall organizational objectives, ensuring efficient movement of goods and better customer service.

27. Explain the major advantages of green logistics.

Green logistics helps companies reduce environmental impact by adopting eco-friendly practices such as fuel-efficient transportation, recyclable packaging, and optimized routes. These practices lower carbon emissions, save energy, and reduce operational costs. Additionally, green logistics enhances a company's brand reputation because customers increasingly prefer environmentally responsible businesses. It also ensures long-term sustainability by minimizing waste and complying with environmental regulations, making the supply chain more efficient and responsible.

28. Explain how reverse logistics supports customer satisfaction through easy returns.

Reverse logistics allows customers to return defective, unwanted, or recyclable products quickly and conveniently, which builds trust and confidence in the company. A smooth return process reduces customer frustration and ensures they receive replacements or refunds without delay. When customers know they can return products easily, they are more likely to purchase again in the future. Thus, reverse logistics improves overall service quality, increases loyalty, and strengthens the company's relationship with its customers.
