MAHATMA GANDHI UNIVERSITY , KOTTAYAM

MGU-UGP(HONOURS)REGULAR EXAMINATION , NOVEMBER ,2025

THIRD SEMESTER

MG1DSCPHL100: DEDUCTIVE LOGIC

ANSWER KEY

QPCODE:25900906

PART A

Answer any 8 questions

1. Combination of both conversion and obversion
   Subject of the conclusion: contradictory of the predicate of the conclusion
   A fully contrapositive: A to A
   E to O: contraposition by limitation(universal premises particular conclusion)
   I : not valid
   O to O
2. Yes , both are distributed
3. Predicate distributed
4. 256
5. If p then q
   If R then S
   P or R
   Q or S
6. Assert or deny something about the subject
7. Yes
8. Declarative form: Either true or false
9. Both S and p undistributed
10. Deduction: conclusion formally deduced from premises- Induction: probable to the conclusion
11. Constructive dilemma: Affirm the two antecedent of the major premiss in the minor premiss then affirm the two consequent in the categorical conclusion
    Destructive dilemma: deny the consequences of the major premiss in the minor premiss and denies the two antecedents of the major premiss in the categorical conclusion

PART B

Answer any 6 questions

12. A syllogism contains more than three terms

13. A proposition
    Based on Quantity: universal
    Based on quality : Affirmative
    Regarding distribution: subject distributed predicate un distributed
14. Use natural language, syllogistic, categorical proposition- A,E,I,O, Mediate -immediate inferences- qualitative
    Formal- uses of symbols- precision, connectives – use variables, Quantification
15. a) The major premise must be universal in the Figure 1

    b)The minor premiss must be affirmative in the figure 1

    AAA: Barbara

    The first vowels stands for major premiss,second for the minor premiss and the last for conclusion

    EAE:

    Violation of a,b followed the fallacy of illicit major

16. A proposition distribute subject only
    E proposition distribute both subject and predicate
    I proposition distribute none of the term
    O proposition distribute predicate only
    A and E are the universal distribution : both distribute subject
    I and o are particular proposition: subject undistributed in both I and O
17. I and o are particular proposition: subject undistributed in both I and O
    A and E are Universal proposition

    A proposition distributes subject only

    E proposition distribute both subject and predicate
18. Directive functions of language: command,direct, request or suggest- truth and falsity is not applied,- emotive language is subjective
    Performative: mixture of expressive and directive discourse- ceremonial discourses- social acts
19. If p then Q
    Q
    There fore, ~P is true
20. Categorical proposition -unconditional proposition
    A – All men are mortal
    E – No men are intelligent
    I – Some roses are red
    O- Some roses are not black
21. Deductive logic- formal in nature – based on structure- universal to particular
22. Antecedent : cause of the proposition or the if part of the proposition
    Consequent : Effect of the proposition or then part f the proposition

PART C

Answer any two questions

23. All S is p is converted in to All P is S
    P distributed in the conclusion fails to distributed in the premiss
    Alternative conclusion
    All s is P is converted as some S is P
    Conversion by limitation: some deluded persons are nazis
    Contra position : All non deluded persons are non nazis
24. Fallacy : logical error
    Invalid syllogism: if a term distributed in the conclusion but not distributed in the premiss
    If the minor term distributed in the conclusion but not in the minor premiss then the syllogism commit the fallacy of illicit minor
    If the major term distributed in the conclusion but not in the major premiss then the syllogism commit the fallacy of illicit major
25. Argument may be deductive or inductive – argument consist of proposition – proposition consist of two terms – subject – predicate- in a deductive argument the conclusion is supported by premises- deductive argument formal in nature- inductive argument material in form- probable
26. Dilemma – mixed syllogism-major premiss hypothetical – minor premiss disjunctive-conclusion categorical
    Conclusion categorical : simple dilemma
    Conclusion disjunctive: complex dilemma
    Simple constructive
    Simple destructive
    Complex constructive
    Complex destructive
