MGU-UGP (HONOURS)

FOURTH SEMESTER PRACTICAL EXAMINATION

(2024 ADMISSION ONWARDS)

MG4DSCECT201 – AI For Smart Electronics

Duration: 2 Hours

Practical Examination – Model Question Paper

Instructions

1. Demonstrate the given task.
2. A Viva session will follow the demonstration.

(Minimum 3 questions from the Practical module)

3. Lab Report should cover all the subunits of the practical module.

Evaluation Criteria

Viva: 10 Marks

Lab Record: 10 Marks

Demonstration: 15 Marks

Tasks (Choose any ONE from the list)

1. Create content using ChatGPT and demonstrate effective prompt generation.

2. Generate images using any AI image generation tool (Midjourney / DALL·E) and explain the prompts used.

3. Design a simple chatbot using an online platform and demonstrate its working.

4. Integrate ChatGPT with ESP32 and demonstrate basic communication.

5. Build a simple Image Recognition model using an online ML platform.

6. Build an AI based Object Detection system using an online tool or STEMpedia kit.

7. Implement Motion Detection using an AI platform or STEMpedia.

8. Develop an AI based Home Automation application.

9. Experiment with a pre-trained model and explain its working.

10. Demonstrate Gesture Based Gaming using online AI tools.

11. Draw and simulate a Self-Driving Car model.

12. Implement Number Recognition using an online ML tool.

13. Implement Pattern Recognition using an online ML platform.
