QP CODE: 25900220

MAHATMA GANDHI UNIVERSITY, KOTTAYAM
MGU-UGP (HONOURS) REGULAR EXAMINATION MARCH 2025
SECOND SEMESTER

MULTI-DISCIPLINARY COURSE (MDC) - MG2MDCZGY100 -
PET CARE AND MANAGEMENT
(2024 Admission onwards)

Duration: 1 Hour Maximum Marks: 35

Part A
Multiple Choice Questions
Answer **all** questions
Each question carries **1** mark

1. Which of the following is the main focus of PETA? [U] / [CO1]
c) Animal rights advocacy and anti-cruelty campaigns

2. Pick out the pet bird requires the most space due to its large size? [U] / [CO2]
c) Macaws

3. An essential dietary requirement for guinea pigs is [U] / [CO1]
Give full Mark if attempted

4. A place for breeding, raising or taking care of cats is called [U] / [CO4]
a) Cattery

5. The best way to provide a balanced diet for an adult cat is..... [K] / [CO3]
c) Combination of dry and wet food

[5×1 = 5 Marks]

Part B
Short Answer Questions
Answer **5** questions Each question carries **2** marks

6. Give an account on Wildlife Protection Act, 1972. [U] / [CO1]
- to protect wildlife
- to protect habitat
- prohibit hunting and poaching,
- prohibit the trade of endangered species,
- to establish protected areas like national parks and sanctuaries.
- categorizes species under schedules with varying levels of protection
- enforcing strict penalties for violations. **(Any Four Points)**

7. Identify the wings to be trimmed in birds and indicate the reason. [U] / [CO2]

In birds, the primary flight feathers (primaries) are trimmed to limit their flying ability. This helps prevent accidents and escape, and also supports training and bonding with the owner.

8. Comment on Labrador and its behavior. **[U] / [CO2]**

Labrador Retrievers (Lab) are affectionate, intelligent, and highly trainable dogs, making them excellent family companions. They are playful and energetic, requiring regular physical activity to maintain good health.

9. How fertilization take place in dogs? **[U] / [CO2]**
(Give full marks if attempted)

10. Why special dietary needs are recommended for dogs? *(Liberal Valuation)*[U] / [CO2]

Dogs require balanced nutrition tailored to their age, size and activity level. Special diets help maintain proper growth, immunity and prevent health issues like obesity or nutrient deficiency.

11. Differentiate between a Genetic Consultant and other professionals in pet breeding.
(Liberal Valuation) **[U] / [CO3]**

A Genetic Consultant advises breeders on selecting mating pairs to improve genetic health and reduce genetic diseases.
Other professionals (pet breeders, animal welfare officers and marketing managers) focus on training, care or marketing.

12. Note down the basic vaccination schedule in dogs. *(Liberal Valuation)* **[K] / [CO4]**

The basic vaccination schedule in dogs begins at 6–7 weeks of age with core vaccines like DHPPiL (Distemper, Hepatitis, Parvovirus, Parainfluenza, and Leptospirosis) and optional Bordetella. At 9–10 weeks, a booster of DHPPiL is given, with optional vaccines like Lyme and Leptospirosis based on the dog's lifestyle. At 12–16 weeks, a second DHPPiL booster and the Rabies vaccine are administered. At 12–16 months, DHPPiL and Rabies boosters are repeated, along with optional vaccines like Bordetella, Coronavirus, and Lyme. Thereafter, annual vaccinations are recommended based on core needs and exposure risks.

[5×2= 10 marks]

Part C

Short Essays questions, Answer any **4** questions
Each question carries **5** marks

13. Explain the health risks of purebred dogs. **[K] / [CO2]**

Purebred dogs are selectively bred for specific physical or behavioral traits,which are more prone to health problems such as heart disease, eye disorders and skin problems and lead to chronic pain, discomfort, and reduced life expectancy.

14. Explain Fleas infection in Dogs. **[K] / [CO4]**

Fleas cause skin irritation in dogs and can act as vectors for diseases. The main symptoms include erythema (redness of the skin), alopecia (hair loss), and dermatitis, which are usually caused by the dog scratching due to irritation. Diagnosis is made by observing fleas or flea dirt on the dog’s body. Treatment involves the use of antiparasitic drugs, either topical or oral, and also requires controlling fleas in the environment to prevent reinfection.

15. Explain the role of Animal Welfare Board of India (AWBI) in promoting animal welfare and preventing cruelty in India? *(Liberal Valuation)* **[U] / [CO3]**

The Animal Welfare Board of India (AWBI), established in 1962 under the Prevention of Cruelty to Animals Act, 1960, is a statutory advisory body that plays a vital role in promoting animal welfare and preventing cruelty across India. Initiated under the leadership of Smt. Rukmini Devi Arundale, Located at the National Institute of Animal Welfare (NIAW) in Haryana, AWBI advises the government on animal welfare laws and policies, raises public awareness about humane treatment of animals, and ensures enforcement of animal protection laws.

16. Write an account of gout disease in birds. *(Liberal Valuation)* **[U] / [CO4]**

Gout is a metabolic disorder in birds caused by the accumulation of uric acid in the body, leading to joint swelling and discomfort. Birds affected by gout show clinical signs such as swollen joints, difficulty in movement, lethargy, weight loss, and in severe cases, kidney failure. The condition is diagnosed based on these visible symptoms. Treatment involves lifelong administration of medications like allopurinol, which helps reduce uric acid production. Control of the disease focuses on dietary management by avoiding high-purine foods such as organ meats and certain seeds. Providing a balanced, low-purine diet along with fluid therapy is essential to prevent dehydration and support the elimination of excess uric acid.

17. Describe Diabetes Mellitus and Rabies of cat. **[U] / [CO4]**

Diabetes mellitus is a metabolic disorder caused by insulin deficiency or resistance. Obesity, genetics, and pancreatic issues are major risk factors. Symptoms include increased thirst, urination, appetite, weight loss, lethargy, and poor coat. Diagnosis involves checking glucose levels in blood and urine. Treatment includes insulin, medication, and a high-protein, low-carbohydrate diet. Regular monitoring and preventing obesity are essential.

Rabies is a deadly viral disease (Lyssavirus) that affects the nervous system and is spread through bites from infected animals. Symptoms include behavioral changes, salivation, difficulty swallowing, paralysis, and seizures. Diagnosis is confirmed post-mortem. There is no cure once symptoms start. Prevention includes rabies vaccination and keeping cats indoors.

18. Discuss the suitability of the Bombay cat for the Indian climate. **[U] / [CO2]**

The Bombay cat is generally well-suited to the Indian climate due to its short, sleek coat, which helps it tolerate warm temperatures common in most parts of India. As a breed with minimal grooming needs and no thick undercoat, it easily adapts to indoor living. Their affectionate and social temperament also makes them ideal for Indian households, where pets commonly live indoors and interact closely with humans.

(Only description of bombay cat can also be considered for full marks)

[4 × 5 = 20 Marks]
