MGU-UGP REGULAR EXAMIATION MARCH 2025

SECOND SEMESTER

MDC-MG2MDCCFS100-WHITE HAT HACKING AND TOOLS

SCHEME

PARTA (Answer any 10 ,each carries 1 marks)

1.Purpose of hacking is to identify and exploit vulnerabilities in a computer systems and networks to gain unauthorized access or control

2.Define and mention the steps in vulnerability analysis(identifying vulnerabilities ,analysing results, planning exploitation ,tools for analysis).

3.The exploitation phase involves leveraging vulnerabilities identified during previous stages to gain unauthorized access to a target system or network.

4.CISA is a U.S. federal law that promotes collaboration between private sector and government agencies to enhance cybersecurity by facilitating the sharing of threat information and defensive measures.

5.phishing attack

6.email phishing ,spear phishing, smishing(SMS),vishing(voice),whaling ,angler phishing

7.clearing tracks: Remove any evidence of the ethical hacking activity to mimic real -world attackers and ensure systems are left as they were.

8.Also known as ethical hacking refers to the practice of using hacking techniques for legitimate purpose such as identifying and fixing security vulnerabilities in a computer systems ,networks, or software.

9.Section 66C

10.Threat refers to any potential danger(anything that could exploit a vulnerability) that could harm systems ,data, or operations.

11.Dictionary Attacks: Where the hackers attempt to crack passwords by trying various words and phrases from a predefined list or dictionary ,against a password -protected systems.

12.Reconnaissance Phase

PART B(Answer any 3 questions, each carries 5marks)

13.white hat hackers ,authorized by the target organization ,use their skills to find and report vulnerabilities for the purpose of improving system security.This is ethical because they operate with consent and legal authorization ,aiming to enhance security. Black hat hacking ,on the other hand ,is illegal and unethical.

14.Post exploitation :Gather intelligence and asses the potential impact of the compromise.

(Data Exfiltration ,System Monitoring, Lateral Movement)

15.Ransomware encrypts or locks a victim's data or system ,demanding a ransom payment for its release. Spyware, on the other hand ,gathers and transmits information from a user's device without their knowledge ,such as passwords ,browsing history and financial details.

16.Phishing works by luring victims with fraudulent emails messages or calls that mimic legitimate communications from trusted sources .These messages often include malicious links or attachments designed to steal sensitive information like credentials ,credit details ,or personal data.

PART C(Answer any 1 question, each carries 10marks)

17.Explian the phases of hacking(Reconnaissance ,Scanning ,Gaining access ,maintaining access ,and clearing tracks,Documentation and reporting).

18.Packet filter firewall-Analyze network traffic based on simple rules like IP addresses,port,and protocols .

Packet inspection firewall-(specifically ,stateful inspection)maintain a "state table" to track connections and make decisions based on the packets history and connection state .
