MAHATMA GANDHI UNIVERSITY, KOTTAYAM

MGU-UGP (HONOURS) REGULAR EXAMINATION MARCH 2025

SECOND SEMESTER

Multi-Disciplinary Courses (MDC) - MG2MDCJMC101 - DIGITAL MEDIALITERACY

(2024 ADMISSION ONWARDS) QUESTION PAPER CODE: 25900125

Duration: 1.5 Hours Maximum Marks: 50

Remember(K), Understand(U), Apply(A), Analyse(An), Evaluate(E), Create(C), Skill(S), Interest(I)and Appreciation(Ap)

Students should attempt at least one question from each course outcome to enhance their overall outcome attainability.

Part A

Multiple Choice Questions, Answer all questions, Each question carries 1 mark

1. a) Every user and system must be continuously verified before granting access [U] / [CO1, CO2]

2. d) All of the above [U] / [CO1]

3. a) Actively seeking out and engaging with diverse viewpoints

   [U] / [CO1, CO2]

4. b) Attracting customers through valuable content and experiences
   [U] / [CO1, CO2]

5. a) Assigning credit to different touchpoints in the customer journey

[K] / [CO1, CO2]

6. c) Ray Tomlinson [U] / [CO1, CO3,CO4]

7. c) Amplification of misinformation and extremism [K] / [CO1, CO2,CO3

8. c) Click bait [U] / [CO1, CO2,CO3, CO4]

9. a) Fact check explorer [K] / [CO2, CO3,CO4]

10.a) Verification of information [U] / [CO1, CO3,CO4]

11.d) Conspiracy theory [K] / [CO3, CO4]

12.c) Peer-review [U] / [CO1, CO3,CO4]

13.a) Propaganda [U] / [CO3, CO4

14.) Disinformation [U] / [CO2, CO3,CO4]

15.d) Deepfake [K] / [CO1, CO3, CO4] [1x15 = 15]

Part B

Short Answer Type Questions (100 Words)

Answer any 5questions, Each question carries 3 marks

16. Interactivity in digital media allows users to engage directly with content, fostering personalized and immersive experiences. Accessibility ensures that digital content is usable by all individuals, including those with disabilities, promoting inclusivity. Together, they enhance user experience, broaden audience reach, and support equitable digital participation. [U] / [CO2, CO3,CO4]

17. Search Engine Marketing (SEM) works by allowing businesses to place paid ads on search engine results pages when users search for specific keywords. This targeted approach helps attract potential customers actively looking for related products or services. SEM offers advantages like increased visibility, measurable results, and the ability to reach specific audiences efficiently. [U] / [CO1, CO2]

18. Confirmation bias leads individuals to seek out and favor information that aligns with their existing beliefs, ignoring contradictory evidence. In online echo chambers, this bias is amplified as algorithms and community dynamics reinforce exposure to like-minded views. As a result, users become more entrenched in their perspectives, reducing critical thinking and increasing polarization. [U] / [CO1, CO2,CO3]

19. Individuals can critically evaluate sources, cross-check facts with reputable outlets, and be cautious of emotionally charged or sensational content. Platforms can implement robust fact-checking systems, flag potentially false information, and adjust algorithms to reduce the spread of misinformation. Both should promote digital literacy to empower users to recognize and resist misleading content. [K] / [CO1, CO2,CO3, CO5]

20. People often spread fake news due to emotional reactions, such as fear or outrage, which drive them to share content without verifying its accuracy. Some individuals share misinformation to gain social approval, influence others, or reinforce their own beliefs. Additionally, malicious actors may deliberately spread fake news for political, financial, or ideological gain.

    [U] / [CO2, CO3,CO4]

21. Digital information sources include online databases like JSTOR and PubMed, which provide access to scholarly articles and research papers.

Websites and news portals such as BBC News or The Hindu offer real-time updates and multimedia content. Social media platforms like Twitter and LinkedIn also serve as sources of current information, trends, and expert opinions. [K] / [CO2, CO3,CO4]

22. Information flow in digital media refers to the way data, messages, or content move across digital platforms—from creators to audiences—through various channels like websites, social media, emails, and streaming services. It involves the processes of production, transmission, reception, and interaction, often occurring in real-time and influenced by algorithms, user behavior, and platform design. This flow can be linear (one-way), interactive (two-way), or networked (many-to-many), making digital communication dynamic and participatory.
[U] / [CO4, CO5)

23. An expression of opinion is subjective, reflecting personal beliefs, feelings, or preferences rather than objective facts. It often uses value-laden language to convey judgment or evaluation, such as “good,” “bad,” or “impressive.” Additionally, it is typically framed from a first-person perspective, making it clear that the statement is based on individual viewpoint and cannot be definitively proven true or false. [K] / [CO2, CO3,CO4]

[3x5 = 15]

Part C

Essay Type Questions (350 Words), Answer any 2 questions, Each question carries 10 marks

24. Influencer marketing offers several advantages, such as increased brand awareness, credibility, and targeted outreach, as influencers can reach specific, engaged audiences. It leverages the trust influencers have built with their followers, often leading to higher engagement and conversion rates. However, the disadvantages include potential authenticity issues if influencers promote products they don't genuinely use, and the challenge of measuring long-term ROI. It can also lead to oversaturation, where consumers become skeptical of paid promotions. Influencer marketing shapes consumer behavior by creating a sense of social proof and encouraging purchasing decisions through relatability and aspirational content. [U] / [CO1, CO2]

25. In traditional media, usability principles focus on simplicity, clarity, and ease of access, with a focus on linear, one-way communication (e.g., newspapers or television). In contrast, digital media emphasizes interactivity, personalization, and user control, allowing for two-way communication and engagement through websites, apps, and social platforms. Advances in Human-Computer Interaction (HCI) have made digital interfaces more intuitive and adaptive, using design elements like responsive layouts, voice commands, and touch gestures. These improvements allow users to consume information in more dynamic and customized ways, enhancing both convenience and user experience. HCI innovations have also shifted consumption from passive to active, with users now able to interact, search, and navigate content with greater ease and speed. [K] / [CO1, CO2,CO3]

26. Citizens play a crucial role by critically evaluating information, engaging in responsible sharing, and promoting media literacy to avoid misinformation. Media outlets, including traditional and digital platforms, must uphold ethical journalism standards, ensure transparency, and prioritize accuracy to foster trust. Technology, especially AI and algorithms, can enhance information curation but also poses risks, making it essential to design systems that prioritize reliability, diversity, and accountability in the information ecosystem. [U] / [CO3, CO4,CO5]

27. Traditional media, such as television and newspapers, shaped public opinion through centralized, one-way communication, often driven by established institutions and gatekeepers. Digital media, on the other hand, allows for more decentralized, interactive communication, where individuals, influencers, and organizations can directly engage with audiences and influence opinions through social media, blogs, and online forums. [K] / [CO2, CO3,CO4]

[10x2 = 20]
