25900277

MAHATMA GANDHI UNIVERSITY, KOTTAYAM

MGU-BBA(HONOURS) REGULAR EXAMINATION OCTOBER 2025

THIRD SEMESTER

Core Course (CCR) MG3CCRBBA201 - COST AND MANAGEMENT ACCOUNTING

(2024 ADMISSION ONWARDS)

Duration: 2 Hours **Maximum Marks: 70**

Remember(K), Understand(U), Apply(A), Analyse(An), Evaluate(E), Create(C), Skill(S), Interest(I) and Appreciation(Ap)

Part A

Short Answer Questions (four to five sentences)

1a. Distinguish between cost accounting and financial accounting based on purpose and users. [U] / [CO1]

Basis	Cost Accounting	Financial Accounting
Purpose **(2 marks for right explanation)**	To determine, control, and reduce the cost of products or services. It helps management in cost control, pricing decisions, and improving operational efficiency.	Assist managers in planning, decision-making, and performance control. It ensures better coordination, budgeting, and long-term business planning.
Users **(1 mark)**	Cost accounting is used internally by management and employees. Internal users: Management, Cost accountants, Production managers, Department head, etc	Mostly by external users such as Shareholders, Creditors, Investors, Government and tax authorities. Also be used by firm and employees for financial analysis.

1b. What are the different types of overhead? Give two examples of each. [K] / [CO1]

Type of Overhead	
1. Factory or Manufacturing Overheads	Examples (any two): Factory rent, depreciation of machinery, repairs and maintenance of factory equipment, factory lighting and power, indirect wages such as supervisor's salary, and factory insurance.
2. Office and Administrative Overheads	Examples (any two): Office salaries and allowances, office rent, stationery and printing, postage and telephone charges, depreciation of office furniture and computers, and audit fees.
3. Selling and Distribution Overheads	Examples (any two): Advertising and publicity expenses, salesmen's salaries and commissions, carriage outwards or delivery expenses, packing and forwarding charges, bad debts, and depreciation or fuel of delivery vans.
0.5 marks for each type of overhead (explanation not required) and 0.5 marks for each example (Max 3 marks)	

2a. How does financial statement analysis help in assessing a firm's liquidity? [U] / [CO2]

Liquidity refers to a firm's ability to meet its short-term obligations (like paying creditors, wages, and bills) as they become due. Financial statement analysis helps assess a firm's liquidity by:

- Calculating liquidity ratios (current, quick, cash)
- Evaluating working capital position
- Analysing trends and comparisons over time and with industry standards

This ensures a clear understanding of whether the firm can meet its short-term liabilities promptly and efficiently.

2b. Differentiate between comparative and common-size financial statements. [U] /[CO2]

Basis of Difference	Comparative Financial Statements	Common-Size Financial Statements
1. Meaning	Comparative financial statements show the financial data of two or more periods side by side to identify changes and trends over time.	Common-size financial statements show each item as a percentage of a common base figure within the same period to analyse internal relationships.
2. Objective	To compare the firm's performance and financial position over different periods.	To understand the proportion of each item to a key total (like sales or total assets) in a single period.
3. Basis of Analysis	Based on absolute figures and changes (increase or decrease) between years.	Based on percentage relationships of items to a common total.
4. Purpose **(Any other points may be considered)**	Helps in identifying growth trends, increases or decreases in income, expenses, or assets over time.	Helps in analysing the structural composition of financial statements for a single period or comparison across firms.

3a. Net Profit after Tax is ₹1,20,000 and Sales are ₹10,00,000. Calculate Net Profit Ratio. [A] / [CO3]

Given: Net Profit after Tax = ₹1,20,000 and Sales = ₹10,00,000

Net Profit Ratio $= \left(\frac{\text{Net Profit after Tax}}{\text{Sales}}\right) \times 100$ **(1 mark for formula)**

Substitute the values:

Net Profit Ratio $= \left(\frac{1,20,000}{10,00,000}\right) \times 100 = 12\%$ (**1 mark for substituting the values and 1 mark for the right answer**)

3b. Explain the significance of the Debt-Equity Ratio in financial analysis. **(1 mark per well-explained significance; if significance is not written, up to 1 mark can be given for the definition and formula)** [U] / [CO3]

The Debt-Equity Ratio measures the proportion of long-term debt to shareholders' equity in a company's capital structure. The Debt-Equity Ratio shows how much debt a company uses compared to its own money (shareholders' equity) to finance its assets.

Debt-Equity Ratio=Shareholders' Equity/ Long-term Debt

Significance (any three points)

- Shows Capital Structure Balance: It reveals how the company finances its assets—whether through borrowed funds or shareholders' funds—helping to assess the balance between debt and equity.

- Measures Solvency: It reflects the firm's ability to meet its long-term obligations. Lower ratios suggest better solvency and creditworthiness.
- Indicates Financial Risk: A high ratio means more debt and higher risk; a low ratio means lower risk and more safety.
- Helps Investors and Lenders: Investors and banks use it to decide whether it's safe to invest or lend money to the company.
- Aids in Capital Planning: Management uses it to balance between debt and equity for better cost control.

4a. Explain the term cash flows from investing activities with suitable examples. [U] / [CO4]

Meaning **(1 mark):** Cash flows from investing activities refer to the cash inflows and outflows related to the purchase and sale of long-term assets and investments of a business.

Examples **(any two examples, one mark each):**

Cash Outflows: Purchase of land, buildings, or machinery, Purchase of shares, bonds, or other investments, Lending money to others (loans given)

Cash Inflows: Sale of fixed assets like machinery or equipment, Sale of shares or investments, Interest or dividend received on investments

4b. Which statement (Cash Flow or Fund Flow) is more suitable for short-term analysis? Why? [U] / [CO4]

The Cash Flow Statement is more suitable for short-term analysis. **(1 mark)**

The Cash Flow Statement is preferred for short-term analysis because it provides a clear picture of liquidity and cash availability, which is essential for managing short-term financial needs. Cash flow reflects immediate financial strength, unlike fund flow which focuses on long-term movement of working capital. It shows the actual inflow and outflow of cash during a short period, usually a month, quarter, or year. **(2 mark)**

5a. How can you find profit using the marginal cost equation? [U] / [CO4]

The Marginal Cost Equation helps in finding profit by relating Sales (S), Variable Cost (V), Fixed Cost (F), and Profit (P).

Marginal Cost equation is : Contribution = Sales –Variable Cost (V)

Contribution is also Fixed Cost (F) + Profit (P)

Rearrange the equation:

$$\text{Profit (P)} = \text{Sales (S)} - (\text{Variable Cost (V)} + \text{Fixed Cost (F)})$$

5b. What is the main objective of a budget? [K] / [CO4]

(The question is what IS the MAIN objective of budget? Marks can be given even if well-explained one objective is written with examples. Consider favourably if the question is interpreted as objectives of budget.)

The main objective of a budget is to plan, coordinate, and control the financial operations of a business to ensure efficient use of resources and achievement of organisational goals.

1. Planning
2. Control
3. Efficient Resource Allocation
4. Coordination
5. Performance Evaluation
6. Cost Reduction

Part B

Short Essay

6a. Prepare a Comparative Income Statement of Sintex Manufacturing Ltd. and interpret the expense control efficiency.(Refer Question paper for question)

(4 marks for the problem and 1 mark for interpretation)

Comparative Income Statement of Sintex Manufacturing Ltd.
(for the years ended 2022 and 2023)

Particulars	2022 (Rs. in '000)	2023 (Rs. in '000)	Absolute Change (Rs.)	% Change
Revenue from Operations	1,800	2,200	400	22.22%
Other Income	120	150	30	25.00%
Total Revenue	1,920	2,350	430	22.40%
COGS	1,100	1,350	250	22.73%
Gross Profit	820	1,000	180	21.95%
Operating Expenses	400	500	100	25.00%
EBIT	420	500	80	19.05%
Interest	80	100	20	25.00%
PBT	340	400	60	17.65%
Tax	102	120	18	17.65%
PAT	238	280	42	17.65%

Interpretation (1 marks): Revenue Growth: Total revenue increased by 22.4%, indicating healthy growth in operations. COGS: The cost of goods sold rose by 22.73%, slightly higher than the revenue growth rate. This means production cost efficiency remained almost constant, but no major cost savings were achieved. Operating Expenses: Operating expenses increased by 25%, which is higher than the growth in total revenue (22.4%). This shows that the company's operating expense control weakened slightly in 2023.
While Sintex Manufacturing Ltd. achieved good revenue growth between 2022 and 2023, the increase in operating expenses and COGS outpaced profit growth, suggesting that expense control efficiency declined slightly.

6b. Explain the significance of financial analysis to various stakeholders [U]/[CO2]

Financial Statement Analysis (FSA) is the process of examining and interpreting a company's financial statements — such as the Balance Sheet, Income Statement, and Cash Flow Statement — to assess its financial health, performance, and trends over time. It helps users make informed decisions by evaluating profitability, liquidity, solvency, and operational efficiency.

Usefulness to Stakeholders

Stakeholder	Use of FSA
Management	Evaluates operational efficiency, profitability, and liquidity.
Investors	Assesses earning capacity and risk of investment.
Creditors & Banks	Checks creditworthiness and repayment ability.
Employees	Understands financial stability and growth opportunities.
Government	Monitors tax compliance and economic contribution.
Suppliers	Assesses firm's ability to pay dues.

7a Units sold = 3,000; Selling Price per unit = ₹100 Variable Cost per unit = ₹70 Fixed Cost = ₹75,000 [A] / [CO4]

Calculate: a) Total Sales; b) Total Variable Cost; c) Contribution; d) Profit / Loss

a) Total Sales **(1 mark)**

$$\text{Total Sales} = \text{Units Sold} \times \text{Selling Price per Unit} = 3{,}000 \times 100 = ₹3{,}00{,}000$$

b) Total Variable Cost **(1 mark)**

$$\text{Total Variable Cost} = \text{Units Sold} \times \text{Variable Cost per Unit} = 3{,}000 \times 70 = ₹2{,}10{,}000$$

c) Contribution **(2 marks)**

$$\text{Contribution} = \text{Total Sales} - \text{Total Variable Cost} = 3{,}00{,}000 - 2{,}10{,}000 = ₹90{,}000$$

$$\text{or, Contribution} = \text{Selling Price} - \text{Variable Cost} = 100 - 70 = \text{Rs. } 30 \text{ per unit}$$

d) Profit / Loss **(1 mark)**

$$\text{Profit or Loss} = \text{Contribution} - \text{Fixed Cost} = 90{,}000 - 75{,}000 = ₹15{,}000$$

7b. Compare Zero-Based Budgeting (ZBB) with Activity-Based Budgeting (ABB), highlighting their applications. [U] / [CO4]

Introduction and similarity: **(1 mark)**

Unlike traditional budgeting, it does not assume that past expenses will continue automatically.

The core of both systems is rationalisation. They force managers to think critically about resource allocation. ZBB achieves this by requiring a justification for every single rupee, linking it to a necessary function or objective. ABB achieves it by linking every cost to a specific operational activity and its expected volume. In both cases, spending is not assumed; it must be earned and justified.

Key Differences **(Max 3 marks, 1 mark per difference):**

Basis of Comparison	Zero-Based Budgeting (ZBB)	Activity-Based Budgeting (ABB)
Meaning	ZBB is a budgeting approach where every budgeting cycle starts from a "zero base." Each expense must be justified as if it were new, regardless of past budgets.	ABB is a budgeting method that bases financial planning on the activities that drive costs, linking resources to organizational processes and outputs.
Focus	Focuses on justifying expenses and eliminating unnecessary costs.	Focuses on identifying cost drivers and improving operational efficiency.
Starting Point	Starts from zero — no reference to previous budgets.	Starts from forecasted activities and their resource requirements.
Basis of Budgeting	Decision packages are prepared for each activity, and management prioritizes them based on necessity and benefit.	Cost drivers and activity analysis are used to determine required resources for each activity.
Complexity	Relatively simpler than ABB, though time-consuming.	More complex, requiring specialized systems for activity tracking and costing.
Flexibility	Can be applied periodically to review budgets and control spending.	Is a continuous process, linked to operational performance and efficiency improvement.
Outcome	Results in better cost justification and elimination of inefficiencies.	Results in better cost control, process improvement, and accurate cost estimation.

Example of Application: **(1 mark)**

ZBB: Used in government departments, NGOs, and corporate cost-control programs to justify spending.

ABB: Used in manufacturing firms, logistics companies, and service organisations to align budgeting with activity levels.

8a. Explain the concept of marginal costing. In what ways is it useful for business decisions? [U] /[CO4]

Introduction to explain the concept of marginal costing: **(2 marks)** Marginal costing is a technique of cost accounting which is concerned with the effect of changes in volume of output on the cost and profit. Marginal

costing is the ascertainment of marginal cost and the effect on profit of changes in volume or type of output by differentiating between fixed costs and variable cost.

Applications of Marginal Costing in Business Decision-Making (3 marks, 1 mark for each valid point explained)

1. **Fixation of Selling Price:** Marginal costing helps determine the minimum price at which a product can be sold without incurring a loss.
2. **Effect of Changes in Selling Price or Costs:** Marginal costing helps analyse the impact of changes in selling price, variable cost, or fixed cost on profit.
3. **Make or Buy Decisions:** When a company faces the choice of manufacturing a component internally or buying it from an outside supplier, marginal costing helps compare the variable production cost with the purchase price.
4. **Determining the Break-even Point**
5. **Profit Planning:** It also allows businesses to estimate how changes in price, cost, or volume affect profitability.
6. **Product Mix Decisions (Choosing the Most Profitable Product):** By calculating the contribution per unit of limiting factor (e.g., labor hour, machine hour), management can prioritize products that generate the highest contribution per unit of constraint.
7. **Decision to Continue or Shut Down Operations**

8b. Discuss the role of Fund Flow Statement in financial planning and control [U] /[CO4]

Introduction explaining Fund flow statement **(1 mark):** A Fund Flow Statement is a financial report that shows the movement (inflow and outflow) of funds within an organization during a specific accounting period. It explains how the working capital has changed between two balance sheet dates and identifies the sources and applications (uses) of funds. It is also known as a Statement of Changes in Financial Position or Statement of Sources and Uses of Funds.

Role of Fund Flow Statement in Financial Planning and Control **(4 marks)**

1. Helps in Understanding Financial Position: The fund flow statement shows how financial resources have been generated and utilised.
2. Tool for Financial Planning: Management can plan future financing and investment activities. It helps forecast future fund requirements and ensures the company maintains adequate working capital.
3. The statement helps management monitor and control the flow of funds within the business. It can identify areas of fund mismanagement or excessive use of resources, helping to take corrective actions.
4. Evaluation of Financing and Investment Policies: It ensures that long-term funds are used for long-term assets and not for short-term needs.
5. Aids in Working Capital Management: The statement explains changes in working capital, helping managers maintain an optimum level of current assets and liabilities.

6. Helps management in making informed decisions about expansion, dividend distribution, debt repayment, or capital restructuring.
7. Communicates Financial Health to Stakeholders

Part C

Long Essay

9a From the following information, prepare a cost sheet for Ram Manufacturing Ltd, bringing out the various components of cost9 [A] / [CO1]

Cost Sheet of Ram Manufacturing Ltd. for year ended 31-12-2024

Particulars	Amount (₹)	Amount (₹)
Opening Stock of Raw Material (01-01-2024)	60,000	
Add: Purchases of Raw Material	1,90,000	
Raw Material available	2,50,000	
Less: Closing Stock of Raw Material (31-12-2024)	(50,000)	
a) Material Consumed (2 marks)		**2,00,000**
Add: Direct Wages	60,000	
b) Prime Cost (2 marks)		**2,60,000**
Add: Factory Overhead	30,000	
Add: Opening Work-in-Progress	13,000	
Less: Closing Work-in-Progress	(15,000)	
c) Factory Cost/ Works Cost (2 marks)		**2,88,000**
Add: Administration Overhead	50,000	
d) Cost of Production		**3,38,000**
Add: Opening Stock of Finished Goods	70,000	
Less: Closing Stock of Finished Goods	(80,000)	
e) Cost of Goods Sold (COGS) (2 marks)		**3,28,000**
Add: Selling & Distribution Overhead	65,000	
f) Cost of Sales (2 marks)		**3,93,000**
Sales (20,000 units × ₹20) (2 marks)	**4,00,000**	
g) Profit (Sales − Cost of Sales) (2 marks)		**7,000**

2 marks each for each right answer as above and 4 marks for the format.

9b. Explain in detail the advantages and limitations of: (a) Financial accounting (b) Cost accounting (c) Management accounting [U]/[CO1]

Marks can be given for writing three to four points under each head: (3-4 marks for each head)

Advantages of Financial Accounting: **(3 marks)**	Limitations of Financial Accounting: (3 marks)
1. Systematic Record of Transactions	1. Historical in Nature
2. Determines Profit or Loss	2. Lacks Detailed Cost Information: It does not reveal cost per product, process, or department, which limits internal cost control.
3. Shows Financial Position and to understand the financial health of the business.	3. It shows overall profit or loss but not the efficiency of departments or operations.
4. Fulfils Legal and Statutory Requirement	4. Possible Manipulation or window dressing
5. Helps in Decision-Making	
6. Facilitates Comparison	

7. Useful for External Users	5. Ignores Non-Monetary Aspects 6. Since it provides data after transactions have occurred, it offers little support for real-time decisions.
Advantages of Cost Accounting (**4 marks)** 1. Helps in Cost Control: By comparing actual costs with standard or budgeted costs, management can identify variances and take corrective action. 2. Assists in Decision-Making 3. Aids in Fixing Prices 4. Facilitates Cost Reduction 5. Helps in Preparing Budgets 6. Improves Efficiency: Regular cost reporting motivates departments to work efficiently and reduce wastage. 7. Evaluates Performance: helps in assessing profitability and responsibility accounting.	Limitations of Cost Accounting (3 marks) 1. Expensive System 2. Complex Procedures 3. Based on Estimates: Some overheads and cost allocations are based on estimates, reducing accuracy. 4. Cost accounting complements but cannot replace financial accounting — both are needed. 5. Employees may resist cost control measures, fearing tighter supervision or higher workload. 6. Subjectivity in Overhead Allocation: Allocation of indirect costs may involve arbitrary decisions, affecting accuracy.
Advantages of Management Accounting **(4 marks)** 1. Assists in Planning: Provides budgets, forecasts, and trend analysis 2. Aids in Decision-Making: Offers analytical tools such as marginal costing, break-even analysis, and ratio analysis for effective managerial decisions. 3. Improves Control. 4. Helps in Policy Formulation: Supplies data for formulating pricing, production, and investment policies. 5. Facilitates Coordination by Integrating information from different departments, Encourages Efficiency: 6. Uses financial and non-financial information to forecast future trends and prepare for risks.	Limitations of Management Accounting **(3 marks)** 1. It cannot function independently — it relies on the accuracy of underlying financial and cost accounting systems. 2. Lack of Standardisation 3. Subjective Judgments: Interpretation of data often depends on managerial judgment, which can lead to bias. 4. Expensive to Implement 5. Based on Historical Data 6. Resistance to Change

10a. Balance Sheet of Alpha Manufacturing Ltd. as on 31st March 2025 is given below (*refer question paper for question)* [An] /[CO3]

Note: 5 marks for each question, in which 1 mark can be given for writing the correct formula, 1 mark for interpretation and 3 marks for the steps and answers.

(i) Long-term Solvency Analysis

1. Debt-Equity Ratio

$$\text{Debt-Equity Ratio} = \frac{\text{Long-term Debt}}{\text{Shareholders' Funds}}$$

Long-term Debt = 12% Debentures + Long-term Loans

= 1,15,000 + 80,000 = ₹1,95,000

Shareholders' Funds = Equity Share Capital + Reserves & Surplus

= 1,80,000 + 85,000 = ₹2,65,000

$$\text{Debt-Equity Ratio} = \frac{1,95,000}{2,65,000} = 0.736:1 \approx** 0.74:1 **$$

Interpretation: The company has ₹0.74 of long-term debt for every ₹1 of shareholders' funds — indicating a sound solvency position (moderate use of debt).

Alternatively:

Debt–Equity Ratio=Internal Equities/ External Equities

External Equities (Outsider's Funds) include:

→ Long-term liabilities + Current liabilities

= 12% Debentures + Long-term Loans + Sundry Creditors + Bills Payable + Outstanding Expenses + Bank Overdraft

$$= 1,15,000 + 80,000 + 60,000 + 30,000 + 10,000 + 10,000 = ₹3,05,000$$

Debt–Equity Ratio== $\frac{3,05,000}{2,65,000} = 1.15:1$

2. Proprietary Ratio

$$\text{Proprietary Ratio} = \frac{\text{Shareholders' Funds}}{\text{Total Assets}}$$

Shareholders' Funds = Equity Share Capital + Reserves & Surplus

= 1,80,000 + 85,000 = ₹2,65,000

$$\text{Proprietary Ratio} = \frac{2,65,000}{5,70,000} = 0.465 \approx** 0.47:1 **$$

Interpretation: About 47% of the company's total assets are financed by shareholders' funds. This indicates moderate financial strength — the company is not overly dependent on borrowed capital.

(ii) Short-term Liquidity Analysis

1. Current Ratio

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}}$$

Current Assets = Inventory + Sundry Debtors + Bills Receivable + Cash in Hand + Cash at Bank + Prepaid Expenses

=1,00,000 + 80,000+ 40,000 + 20,000 + 20,0000 + 10,000 = 2,70,000

Current Liabilities = Sundry Creditors + Bills Payable + Outstanding Expenses + Bank Overdraft

=60000+30000+10000+10000 = 1,10,000

$$\text{Current Ratio} = \frac{2{,}70{,}000}{1{,}10{,}000} = 2.45:1$$

Interpretation: The ideal ratio is 2:1, so the company's liquidity position is very comfortable. It can easily meet its short-term obligations.

2. Liquid Ratio (Quick Ratio)

$$\text{Liquid Ratio} = \frac{\text{Liquid Assets}}{\text{Current Liabilities}}$$

Liquid Assets = Current Assets − (Inventory + Prepaid Expenses)

= 2,70,000 − (1,00,000 + 10,000) = 1,60,000

Current Liabilities = Sundry Creditors + Bills Payable + Outstanding Expenses + Bank Overdraft

=60000+30000+10000+10000 = 1,10,000

$$\text{Liquid Ratio} = \frac{1{,}60{,}000}{1{,}10{,}000} = 1.45:1$$

Interpretation: The ideal quick ratio is 1:1. Hence, the company has a strong short-term liquidity position and can comfortably meet immediate obligations.

10b. From the following information, calculate: (Refer Question Papre) [A] / [CO3]

(i) Inventory Turnover Ratio (6 marks)

Inventory turnover = COGS / Average Inventory **(Formula: 1 mark)**

Steps: **(5 marks for correct steps with answer, proportionate marks for steps could be given)**

Average Inventory = (Opening Stock + Closing Stock) / 2 = (14,000 + 44,000) / 2 = ₹29,000

COGS = Opening Stock + Net Purchases + Carriage + Wages − Closing Stock

= 14,000 + 50,000 + 2,000 + 38,000 − 44,000 = ₹60,000

Inventory turnover $= \frac{60{,}000}{29{,}000} = 2.069$ times

(ii) Trade Receivables Turnover Ratio (6 marks)

Receivables turnover = Net Credit Sales / Average Trade Receivables **(Formula: 1 mark)**

Steps: **(5 marks for correct steps with answer, proportionate marks for steps could be given)**

Assuming all sales are credit sales and Opening Debtors = ₹0:

Sales = ₹1,04,000; Sales Returns = ₹4,000

Net Sales = ₹1,04,000 − ₹4,000 = ₹1,00,000

Average Trade Receivables = Closing Debtors = 30,000

$$\text{Receivables turnover} = \frac{100{,}000}{30{,}000} = 3.33 \text{ times}$$

(iii) Average Debt Collection Period (4 marks) (Formula 2 marks, working 2 marks)

$$\text{Average collection period} = \frac{\text{Days in year (365)}}{\text{Trade Receivables Turnover Ratio}} = \frac{365}{3.33} \approx 109.55 \text{ days}$$

(iv) Gross Profit Ratio (Total 4 marks: Formula: 1 mark; Steps: 3 marks for correct steps with answer, proportionate marks for steps could be given)

Gross Profit Ratio = (Gross Profit / Net Sales) × 100

Given: Gross profit = Rs 40,000; Sales = ₹1,04,000; Sales Returns = ₹4,000

Therefore, Net Sales = ₹1,04,000 − ₹4,000 = ₹1,00,000

Therefore,

$$\text{Gross Profit Ratio} = \frac{40{,}000}{100{,}000} \times 100 = 40\%$$

General Instruction: Quality of explanation and examples can increase marks even if quantity is low. If the answer shows conceptual understanding but lacks elaboration due to time, award marks generously. Expecting a liberal approach in valuation.

Scheme Prepared by:

Dr Mishel Elizabeth Jacob

Assistant Professor
