MAHATMA GANDHI UNIVERSITY, KOTTAYAM
MGU-UGP (HONOURS) Regular EXAMINATION October 2025
Third SEMESTER

Discipline Specific Core Course (DSC) - MG3DSCFSC202 –
FUNDAMENTALS OF CRIMINOLOGY
Scheme for evaluation

Part A: One-word / Very Short Answers (10 × 1 = 10 marks)
All questions compulsory.
Evaluation: Each correct point = 1 mark; minor spelling errors acceptable if meaning is clear.

1. Definition including Behaviour violating social norms
2. Positivist school
3. Learning through observation and imitation
4. Victim rights / Plea bargaining / Speedy trials (Anyone)
5. Definition relevant to Immoral or wicked behaviour
6. Ecological / Environmental school
7. Bio-criminology / Genetics
8. Police, Judiciary, Prisons, Corrections (All important)
9. Need for Achievement / Affiliation / Power
10. Murder / Theft / Assault etc. (Any relevant one)

Part B: Short Answers (Any 5 × 3 = 15 marks)

Evaluation:

Concept clarity – 1 mark
Key points – 1 mark
Relevance & structure – 1 mark

11. Accusatorial system – adversarial, burden on prosecution, judge neutral.
    Inquisitorial system – judge investigates, controls inquiry.
    Main difference lies in approach to evidence and trial conduct. (three differences in each part) (3 marks)

12. Freud's structure:
    Id – instinctual drives.
    Ego – rational mediator.
    Superego – moral conscience. Conflict may cause deviant behaviour.
    Imbalance among these may lead to criminal tendencies. (Each carry one mark (3 mark)

13. Primary deviance: initial act of rule breaking.

Secondary deviance: when one internalizes deviant identity due to labeling by society. (1.5 marks on each) 3 Marks in total

14. Police investigate crimes by registering FIRs, collecting evidence, interrogating suspects, and submitting charge sheets to courts. (explanation including above points 3 Marks)

15. Delinquent subculture refers to groups whose values oppose dominant norms—common among marginalized youth. (3 marks)

16. Criminology helps identify causes, patterns, and methods to prevent crime scientifically and rationally. (explanation including above points 3 Marks)

17. Biological theories overlook social and environmental causes, are deterministic, and lack universality. Or Ignore social and environmental influences; deterministic; outdated. (3 marks)

Part C: Short Essay Questions (Any 5 × 6 = 30 marks)

Conceptual explanation – 3 marks
Logical structure & clarity – 2 marks
Examples / critical remarks – 1 mark

18. **Thorndike & Kohler Principles**
Thorndike's *Trial and Error* and *Law of Effect* suggest learning occurs through repeated attempts and consequences. Kohler's *Insight Learning* shows problem-solving through sudden understanding. Both explain human learning and can be linked to behaviour modification in crime.
19. **Mens Rea and Actus Reus**
For an act to be a crime, both guilty mind (*mens rea*) and guilty act (*actus reus*) must coexist. Mens rea indicates intention, while actus reus shows execution. Example: murder involves intention and action together.
20. **Constitutional School**
Sheldon proposed body types influence personality and crime—Mesomorphs (muscular) more prone to aggression, Endomorphs (soft) sociable, Ectomorphs (thin) introverted. Though oversimplified, it linked biology and crime.
21. **Maslow vs Herzberg**
Maslow's hierarchy moves from physiological needs to self-actualization. Herzberg divides motivators (achievement) and hygiene factors (salary). Both stress motivation but differ in scope—Herzberg applies to job satisfaction.
22. **Role of Political Science & Economics**
Political corruption, unemployment, and poverty create structural inequalities that foster crime. Economic crises increase theft and fraud. Criminology uses these disciplines to study macro causes of crime.
23. **Containment Theory**
Reckless proposed that strong inner controls (self-concept) and outer controls

(family, society) prevent individuals from becoming delinquent even under pressure.

24. **Interdisciplinary Nature of Criminology**
Criminology blends law, sociology, psychology, and forensics. It studies crime causation, prevention, and control using diverse methods from social and natural sciences.

Part D: Essay Type Questions (Any 1 × 15 = 15 marks)

Evaluation Scheme:

Introduction & conceptual clarity – 3 marks
Discussion & theoretical coverage – 6 marks
Critical evaluation / application – 4 marks
Conclusion – 2 marks

25. Differential Association Theory

Edwin Sutherland stated that criminal behaviour is learned through social interaction. His nine propositions explain that people learn techniques and motives for crime by associating with others. Frequency, duration, priority, and intensity of contacts affect learning. The theory emphasized environment over heredity but ignores individual choice and innate tendencies.

26. Crime and Sin

Crime is a legal wrong violating state laws, punishable by court (e.g., theft, murder). Sin is a moral or religious wrong violating divine law but not necessarily punishable by law (e.g., lying). Thus, all crimes are sins in moral terms, but not all sins are crimes in law
