MAHATMA GANDHI UNIVERSITY, KOTTAYAM
MGU-UGP (HONOURS) REGULAR EXAMINATION OCTOBER 2025
THIRD SEMESTER
Discipline Specific Core Course (DSC) – MG3DSCHMC200 – FOOD PRODUCTION OPERATIONS-I (2024 ADMISSION ONWARDS)

PART- A

1. Jaggery adds caramel flavor and natural sweetness while acting like sugar in binding and moisture.
2. Cooking softens cell walls and gelatinizes starch, altering vegetable texture.
3. Fat shortens gluten strands, making baked goods tender.
4. Bran is a main by-product of wheat milling.
5. Sugar provides sweetness, colour, and tenderness in bakery products.
6. Washing before peeling retains more nutrients than after peeling.
7. Roasting uses dry convection heat; grilling uses direct radiant heat, giving different textures.
8. Yolk coagulates at a higher temperature and provides richness; albumen sets firmer.
9. Tomatoes are briefly cooked to retain flavor and colour while reducing acidity.
10. Fresh eggs have a firm yolk and thick white; stale eggs spread widely and flatten.
11. Emulsified dressings are stable mixtures, while temporary emulsions separate quickly.
12. Higher fat gives sauces a richer texture and smoother mouthfeel.
13. Butter gives gloss and flavor; cream gives richness and lightness.
14. Roasted bones give darker colour and stronger flavor; raw bones give clearer stock.
15. In sponge cakes, eggs provide aeration; in cookies, they give structure and moisture.

PART-B

16. Cooking kills harmful microbes and preserves food quality.
17. Thickened soup preparation involves sweating, adding stock, thickening with starch, simmering, and seasoning.
18. Poaching softens fruits gently; baking caramelizes and intensifies flavor.
19. Eggs can thicken, bind, emulsify, or aerate, making them versatile in all dishes.
20. Dessert sauces add moisture, flavor contrast, and visual appeal to plated desserts.

21. Proper organizational structure allows workload redistribution and teamwork during staff shortage.

PART-C

22. Chemical raising agents release gas to lighten batter; sponge cake uses baking powder for aeration during mixing and baking.
23. Canning alters flavor and texture; freezing retains nutrients; preserves use sugar for long shelf life.
24. Raw salads keep nutrients and crispness; cooked ones enhance flavor and digestibility.
