ANSWER KEY

QP CODE: 25900570

MAHATMA GANDHI UNIVERSITY, KOTTAYAM

MGU-UGP (HONOURS) Regular EXAMINATION October 2025

THIRD SEMESTER

Discipline Specific Core Course (DSC) - MG3DSCPOL202 – GREEN POLITICS

(2024 ADMISSION ONWARDS)

PART A

1. 1980 [World Conservation Strategy, published by the International Union for Conservation of Nature (IUCN)]/1987[World Commission on Environment and Development].

2. 1995/Berlin, Germany.

3. Contamination of water /alteration of its physical, chemical or biological properties.

4. Deforestation.

5. 30 percent.

6. 36.

7. 2030.

8. UN Commission on Sustainable Development (CSD).

9. Kerala Sastra Sahitya Parishad (KSSP).

10. Chipko Movement.

PART B

11. Ecological Footprint measures human demand on nature through variables such as cropland, grazing land, forest area, fishing grounds, built-up land, and carbon footprint- representing the biologically productive area needed to sustain resource consumption.

12. National Action Plan on Climate Change (NAPCC) promotes sustainable agriculture through efficient irrigation, soil health management, crop diversification, and climate-resilient farming practices- aiming to enhance productivity while reducing emissions and preserving ecological balance.

13. Constitutional challenges include overlapping jurisdictions, weak enforcement, limited awareness- conflict between fundamental rights and development priorities- hindering effective implementation of environmental laws in India.

14. Climate change affects agriculture in developing countries by altering rainfall patterns, increasing droughts, reducing yields, and threatening food security- worsening poverty and livelihood dependence on natural resources.

15. National Clean Energy Program aims to promote renewable energy sources like solar and wind, reduce carbon emissions, and achieve energy security- promoting sustainable economic development in India.

16. Deep Ecology emphasizes intrinsic value of all living beings- advocating an eco-centric worldview that prioritizes ecological balance, biodiversity preservation- coexistence over human-cantered development and exploitation.

17. Earth Summit 1992 promoted sustainable development by introducing Agenda 21 and Rio Declarations-encouraging nations to integrate environmental protection with economic growth and global cooperation.

18. Public Interest Litigation allows citizens to approach the Supreme Court for environmental protection, leading to landmark judgments-Ganga pollution and Vellore case- reinforcing environmental rights under Article 21.

19. Climate justice links human rights with climate action- emphasizing that those least responsible for emissions often face the worst impacts- demanding fairness, equity, and accountability in global climate policies.

20. Organic farming in the Farm to Fork Strategy reduces chemical use, promotes biodiversity, ensures soil health, and supports sustainable food systems-supported by an Organic Action Plan- helping the EU achieve environmental and health goals by 2030.

PART C

21. Public trust doctrine ensures that natural resources like air, water, and forests are held in trust by the state for public use-prevents overexploitation by private or governmental entities, promoting a balance between economic development and environmental conservation through responsible, sustainable use of shared resources.

22. 1972 Stockholm Conference emphasized the right to a healthy environment and the responsibility to protect it-recommended integrating environmental concerns into development planning, controlling pollution, conserving resources- promoting international cooperation-26 principles adopted laid the foundation for global environmental governance and sustainable development policies.

23. Environment Protection Act, 1986 prescribes imprisonment up to five years or fines up to one lakh rupees for violations, with higher penalties for continued offences-provides a deterrent framework, weak enforcement, bureaucratic delays-inadequate monitoring often limits its effectiveness in preventing recurring environmental violations.

24.Ozone layer depletion is caused mainly by chlorofluorocarbons (CFCs) and halons, leading to harmful UV radiation, health risks, and ecological imbalance-international efforts like the Vienna Convention (1985) and Montreal Protocol (1987) successfully phased out ozone-depleting substances, showing effective global cooperation in addressing environmental challenges through policy and technology shifts.
