MAHATMA GADHI UNIVERSITY, KOTTYAM

FIRST SEMESTER MGU-UGP (HONOURS) REGULAR EXAMINATION NOVEMBER 2024

DISCIPLINE SPECIFIC CORE COURSE- MG1DSCFIM101

GENERAL CONDITIONING & RECREATION

QP CODE24900103

PART A

MCQ **(10x1=10)**

1) c) Increasing resistance or load over time
2) a) Intensity
3) d) Quadriceps
4) b) Cross body mountain climbers
5) a) Heart rate
6) Inappropriate question (Fartlek, Circuit and interval training are the conditioning exercise).
7) d) Speed play
8) d) All of these
9) d) All of these
10) c) Cardiovascular endurance

PART B (Short Answer) Answer any 10 **(10x2=20)**

11)

- **Improve overall fitness-strength, speed, endurance**
- **Prevent injuries**
- **Enhanced athletic performance**
- **Support recovery**
- **Lifelong health and wellness**
- **Better preparation for sports and physical activity**
- **Increased self-confidence and self-esteem.**

12)

- **Frequency**
- **Intensity**
- **Time**
- **Type**

13)

- **Poor squat form**
- **Inadequate push up form**
- **Not engaging core muscle**
- **Improper landing**
- **Not keeping chest up**

14)

- **Improved cardiovascular health**
- **Improved caloric burn**

- **Improved metabolic function**
- **Increased muscle strength**
- **Improved mental health**
- **Athletic performance**
- **Economy of time.**
- **Overall fitness**
- **Reduced inflammation and oxidative stress**
- **Helps in weight loss**

15)

- **Static stretching**
- **Dynamic stretching**
- **Assisted stretching**
- **Partner stretching**
- **Ballistic stretching**

16)

- **Increased muscle mass and strength**
- **Improved bone density**
- **Enhanced mental wellness being**
- **Improved athletic performance.**
- **Better joint stability**
- **Reduced injury**
- **Helps in weight management**

17)

- **Improved muscle power**
- **Enhanced speed and agility**
- **Muscular strength**
- **Bone density**
- **Athletic performance**
- **Increased metabolic rate**
- **Improves coordination**
- **Improves body posture**

18)

- **Form of exercise**
- **Variety of movements**
- **Involve various muscle groups**
- **Improve strength, flexibility, coordination, balance,**
- **Examples: push up, pull up, squats, Planks, lunges.**

19)

- **Compound exercise**
- **Targets various muscles**
- **Core engagement**
- **Multi planar movement**
- **Neuro- muscular coordination**
- **Increased flexibility and mobility**

20)

- **Flexion and extension of knee joint**
- **Flexion and extension of hip joint**

- **Improved strength of adductor muscles.**
- **Strengthen lower body muscles**
- **Activation of core muscles**

21)

- **Erector spine**
- **Latissimus dorssi**
- **Trapezius**
- **Rhomboids**
- **Gluteus maximus**
- **Hamstring**
- **Quadriceps**
- **Abdominals**

22)

- **Quadriceps**
- **Hamstring**
- **Gluteus maximus**
- **Erector spine**
- **Trapezius**
- **Deltoids**
- **Abdominals**

PART C (Short essay) Answer any 4 **(4x5=20)**

- **Insufficient muscle strength, and endurance**
- **Inadequate flexibility and mobility**
- **Insufficient cardiovascular system**
- **Reduced coordination**
- **Poor movement pattern**
- **Muscle imbalance**
- **Improves mood**
- **Muscle fatigue**

24)

- **Muscle stretch**
- **Signal transmission**
- **Muscle contraction**
- **tendon activation**
- **Inhibition of muscle contraction**
- **Reflexive response**

25)

- **progressive overload**
- **Specificity**
- **Progressive resistance**
- **Volume and frequency**
- **Recovery**
- **Consistency**
- **Variety**
- **Periodization**
- **Proper form**

26)

- **Increased cardiac output**
- **Improved myocardial thickness**
- **Increased capillarization**
- **Improved lactate threshold**
- **Increased mitochondrial density**
- **Improved myocardial thickness**
- **Enhanced Vasodilation**
- **Improved muscle oxidative capacity**
- **Increased aerobic capacity**

27)

- **Enhanced muscular endurance**
- **Increased cardiac output**
- **Improved myocardial thickness**
- **Increased capillarisation**
- **Improved lactate threshold**
- **Increased mitochondrial density**
- **Improved myocardial thickness**
- **Enhanced Vasodilation**
- **Improved muscle oxidative capacity**
- **Increased aerobic capacity**

28)

- **High impact**
- **Increased level of enjoyment**
- **Active participation of the trainees**
- **Age-appropriate activity**
- **Intensity can be modified**
- **Burn calories**
- **Increase aerobic capacity**
- **Increased coordination and rhythm**
- **Improved flexibility and mobility**
- **Strengthen muscles**
