MAHATMA GANDHI UNIVERSITY, KOTTAYAM

FIRST SEMESTER MGU – UGP (HONOURS) REGULAR

EXAMINATION NOVEMBER 2024

FIRST SEMESTER

Multi – Disciplinary Course – MG1MDCFSQ101 – BAKING TEHNOLOGY

(2024 ADMISSION ONWARDS)

ANSWER SCHEME

Remember (K), Understand (U), Apply (A), Analysis (an), Evaluate (E), Create (C), Interest(I), Appreciation (Ap) and Skill (S)

Students should attempt atleast one question from each course outcome to enhance their overall outcome attainability.

PART A
Multiple Choice Questions
Answer **all** questions
Each question carries **one** mark

1. Identify, which category the yeast belonged to.

[U] [1]

b) Fungus

2. Choose the scientific name of yeast

[K] [1]

a) *Sacharomyces cervisiae*

3. Give the correct answer, gas produced during fermentation

[U] [1]

b) Carbondioxide

4. Identify which among the following is not a function of leavening agents.

[U] [1]

d) Improve moisture content

5. Omit the odd one out

[K] [2]

b) Sodium chloride

6. Choose the emulsifying agent among the following

[K] [2]

c) Lecithin

7. Identify the reason for crust formation on bread and cake

[A] [1]

a) Maillard reaction

8. Identify the step in which oven spring takes place

[A] [1]

d) Baking

9. Figure out which among the following is not a primary ingredient cookie making?

[U] [2]

c) Yeast

10. Identify, which ingredient, causes cookie spreading in oven

[A] [3]

c) Fat

11. From the given options, select the colour developed during caramelisation

[U] [1]

b) Pale –yellow brown

12. Identify which sugar is best for cookie making?

[U] [2]

b) Powdered sugar

13. Recognize the ideal temperature baking cookies

[A] [3]

a) 175 -200^{0}C

14. Indicate, which among the following is gluten free sweet cookies

[An] [4]

c) Meringue cookie

15. Identify a hard baked product

[A] [3]

d) Cookie

PART B

Short Essay Type Questions

Answer **four** questions

Each question carries **five** marks

16. Illustrate the steps in bread making

[U] [1]

ANS :**Bread making involves the following steps:**

1. Mixing Ingredients. Mixing has two functions: ...
2. Rising (fermentation) Once the bread is mixed it is then left to rise (ferment). ...
3. Kneading. ...
4. Second Rising. ...
5. Baking. ...
6. Cooling.

Steps : 1.5 Marks

Flow chart +Correct Explanation of each step : 5Marks

17. Explain in detail the process of cookie processing

[A] [3]

ANS : Preheat the Oven,Creaming the Butter and Sugars,Adding Eggs and Vanilla,

Mixing Dry Ingredients, Baking and Cooling Explainit in detail.

Steps : 1.5 Marks

Flow chart +Correct Explanation of each step : 5Marks

18. Explain the importance of yeast in bread making

[U] [2]

ANS:Yeast has two primary functions in fermentation: To convert sugar into carbon dioxide gas, which lifts and aerates the dough. To mellow and condition the gluten of the dough so that it will absorb the increasing gases evenly and hold them at the same time.

Detailed explanation of What is yeast, why yeast is adding, steps which yeast is adding and importance of yeast : 5 Marks

19. Briefly explain different types of cookies and give examples

[An] [4]

ANS: Drop Cookies,Stiff Butter Cookies, Meringue Cookies And Sponge Cookies Explain In Detail

Only the Names of different cookies : 1.5 Marks

Name of different types of cookies, definition of each : 5 marks

20. Define the terms of Kneading, Knockback, and Proofing

[K] [1]

ANS : Kneading is the massaging of bread dough before baking. Kneading stretches the strands of gluten in the dough, allowing for more expansion during fermentation.

After bread has been left to rise, it needs to have the excess air knocked out of it before proving. This is called 'knocking back'. -Using floured hands, scrape the risen dough from the bowl and turn it out onto a lightly floured work surface. By knocking back the dough, the large air bubbles are removed, to help create an even texture in the bread loaf.

Proofing (also called proving) is a step in the preparation of yeast bread and other baked goods in which the dough is allowed to rest and rise a final time before baking. During this rest period, yeast ferments the dough and produces gases, thereby leavening the dough.

Definition and purpose of three terms : 5 Marks

21. Elaborate on changes that occur for cookie dough in an oven

[A] [3]

ANS : sugars are caramelizing, which leads to browning. The gas is expanding, and things are rising.” Once out of the oven, as your cookies cool, the previously liquified ingredients begin to harden or solidify.

Explain Caramelization, Maillard reaction, Expansion of gases : 5 Marks
