Scheme QP code: 24900207

MAHATHMA GANDHI UNIVERSITY, KOTTAYAM

FORST SEMESTER MGU-UGP (HONOURS) REGULAR EXAMINATION

NOVEMBER 2024

MDC – MG1MDCPOL101 ECOLOGICAL GOVERNANCE

(2024 ADMISSION ONWARDS)

Part A

ANSWER KEY

1. B
2. D
3. C
4. C
5. A
6. C
7. D
8. C
9. B
10. B

Part B

Short answer type questions

11. COP is the main decision-making body of the UNFCCC - to "stabilise greenhouse gas concentrations at a level that would prevent dangerous anthropogenic (human-induced) interference with the climate system - deal to start "transitioning away" from fossil fuels – loss and damage fund to global south
12. Energy strategy – green growth strategy – poverty reduction strategy – National sustainable development strategy – technology needs assessment – National development plan – other national or sector strategies
13. Climate change is a threat to life system – biodiversity crisis - industrial Revolution, human activities, such as logging, pollution, commercial fishing and the development of large urban settlements, have damaged and degraded precious landscapes - Climate change is currently the second biggest cause of biodiversity loss in the ocean and the fourth biggest cause on land, though it's likely to play a greater role in the future.

14. Western Ghats – older than Himalayas - biodiversity hot spots - geomorphic features of immense importance with unique biophysical and ecological processes - exceptionally high level of biological diversity and endemism - world's eight 'hottest hotspots' of biological diversity.
15. SDG 13 – climate action - CAP - Developing a 1.5°C-compatible climate action plan is a vital step for cities to respond to the climate crisis – COP discussions and summits
16. Around 90 million of the current 123 million forcibly displaced people are living in countries with high-to-extreme exposure to climate-related hazards. Climate refugees are not refugees as per the UN convention of refugees - Climate change increases the risks of extreme weather events – like storms, floods, wildfires, heatwaves and droughts – making them more unpredictable, frequent and intense. At the same time, rising sea levels, droughts and drastic changes in rainfall patterns as a result of warmer temperatures can destroy crops and kill livestock, threatening livelihoods and exacerbating food insecurity.
17. Habitat loss and fragmentation – climate change – overhunting – overfishing – invasive species – pollution – ocean acidification – ecosystem simplification – loss of ecosystem resilience
18. Expansion of agricultural land – livestock grazing – logging and wood harvesting - urbanisation and expansion of cities – human population growth - increased need of resources – slash and burn technics

Part C

Essay type questions

19. Adaptation process – Paris agreement – COP – Kyoto protocol – GEF – plant-based action plan - monitor and evaluate adaptation – plan for adaptation – sharing information, knowledge and initiatives- financial and technological support – targeting stakeholders.
20. the National Forest Policy (NFP), 1988, the National Conservation Strategy and Policy Statement on Environment and Development, 1992, the Policy Statement on Abatement of Pollution, 1992, the National Agricultural Policy (NAP), 2000, National Population Policy (NPP), 2000, and National Water Policy (NWP), 2002.
21. Environmental equity describes a country, or world, in which no single group or community faces disadvantages in dealing with environmental hazards, disasters, or pollution. Ideally, no one should need extreme wealth or political connections to protect the well-being of their families and communities. Environmental equity is a

basic human right. Environmental equity is a basic human right, environmental justice is the act of protecting that right. Environmental justice involves the actions and activism necessary to highlight inequities and level the playing field.

22. Global warming is the phenomenon of a gradual increase in the temperature near the earth's surface. This phenomenon has been observed over the past one or two centuries. There are several causes of global warming, which have a negative effect on humans, plants and animals. These causes may be natural or might be the outcome of human activities. Deforestation - use of fuel – chlorofluorocarbon – agriculture – overpopulation -
